

Program MidtermExam
on the discipline «**Introductiontothetheoryofsupersymmetry**» for undergraduates1
courses of specialty «6M060400 – Physics »

The proposed MidtermExam program on discipline «**Introductiontothetheoryofsupersymmetry**» is made according to the discipline syllabus. The program determines the requirements for the levels of mastering the academic discipline: what the student should have *an idea* after studying the course for 7 weeks, which should know what *skills* and *habits* should be formed.

At MidtermExam, students will be asked two theoretical questions and one task.

Midterm addresses the following questions:

1. Continuous integrals and point particles.
2. Historical review of the gauge theory.
3. Secondary quantization.
4. Harmonic oscillators.
5. The strings of Nambu-Goto.
6. Boson strings.
7. From the path integral to the operators.
8. Superstrings.
9. Two-dimensional supersymmetry.
10. Trees.
11. Local two-dimensional supersymmetry.
12. Quantization of the Green-Schwarz action in cone variables.
13. Conformal field theory and the Kac-Moody algebra.
14. Conformal field theory.
15. Super conformal perfume.
