# **Message from the ICFICE2013 General Chairs**

The 2013 International Conference on Future Information and Communication Engineering (ICFICE2013) was held in Shenyang, China on June 24–26, 2013. In recent society, IT (Information Technology) influenced and changed every aspect of our lives and our cultures. Information and communication technology should be extended to enhance human life by converging engineering technique and scientific technology together. In the future world, IT will play a very important role in convergence of computing, communication, and related fields. The objectives of ICFICE2013 are intended to foster the dissemination of state-of-art research in all IT convergence areas, including its models, services, and novel applications associated with its utilization. This conference gave an opportunity for the participants to exchange new ideas and application experiences.

This year there were 380 paper submissions and 116 papers were accepted for presentation. Authors of accepted papers came from 13 countries and 5 continents, illustrating the international flavor of ICFICE2013. Each paper was reviewed by at least two program committee member and reviewers. We would like to thank all authors of this conference for their paper contributions and presentations and reviewers for their work and excellent contributions.

We would like to express our appreciation to Prof. Jung Tae Kim, Prof. Chung-Huang Yang and Dr. Tony Sahama and the another organizing committee member of ICFICE2013.

Finally, we are delighted to acknowledge the generous sponsorship of ICFICE2013 by the NRF (National Research Foundation), Ministry of Knowledge and Economy, Federation of Sciences and Sciences and Technology Societies and NIPA (National IT Industry Promotion Agency).

The conference was hosted by the KIICE (The Korea Institute of Information and Communication Engineering) and IMATECH Ltd. On the behalf of the committee, we wish participants and quests have a remarkable experiences for developing the research fields and interchanging an academics and friendship.

# Message from the ICFICE2013 Program Chairs

The 2013 International Conference on Future Information and Communication Engineering (ICFICE2013) was held in Shenyang, China on June 24–26, 2013.

The conference program divides into 10 tracks with submitted 117 papers. The papers were also reviewed and focus on convergence of novel applications and services related to information and communication convergence engineering. From this conference, we may be able to exchange and share experiences, new ideas, and research results, with the gathering of learned experts in the field of information, communication technology, and fusion of related fields. The main topics are as follows:

- Track 1: Communication System and Applications
- Track 2: Networking and Services
- Track 3: Intelligent Information System
- Track 4: Multimedia and Digital Convergence
- Track 5: Semiconductor and Communication Services
- Track 6: Imaging and Biomedical Engineering
- Track 7: Ubiquitous Sensor Network
- Track 8: Database and Internet Application
- Track 9: Mobile Communication
- Track 10: IT Fusion Technology

We also would like to appreciate to the members of program committee and organization committee, keynote speakers, reviewers, and authors who have contributed to the success of this conference.

June 2013

# Organizing Committee

## General Co-Chair

President, Hoe Kyung Jung (Paichai University, Korea)  
CEO, Xu Xiao yuan (IMATEC Ltd., China)

## Vice General Chair

Vice President, H. K. Jung (Kunsan National University, Korea)

## Steering Committee

Chang Wu Hur (Mokwon University, Korea)  
Conan K. R. Ryu (Mokwon University, Korea)  
Choon Sik Park (Sheenbang Electroincs, Co.)

## Program Chair/Co-Chair

Jung Tae Kim (Mokwon University, Korea)  
Tony Sahama (Queensland University of Technology, Australia)  
Chung-Huang Yang (National Kaohsiung Normal University, Taiwan)

## Publicity Chair/Co-Chair

Kwang-Baek Kim (Silla University, Korea)  
Cao Ke Rang (IMATEC Ltd., China)

## Program Member

Jin Woo Hong (Electronic Telecommunication Research Institute, Korea)  
Nam Ho Kim (Pukyong National University, Korea)  
Kyung Wook Shin (Kumoh National Institute of Technology, Korea)  
Hyeop-Goo Yeo (Hanshin University, Korea)  
WanBok Lee (Kongju National University, Korea)

Jin Keun Hong (Baekseok University, Korea)  
Song, Teuk Seob (Mokwon University, Korea)  
Doo Heon, Song (Yong-in Songdam College, Korea)  
Soo Kyun Kim (Pai Chai University, Korea)  
Kwangki Ryoo (Hanbat National University, Korea)  
Choi DongOun (Wonkwnag University, Korea)  
Hyuk-Kee Sung (Hongik University, Korea)  
Sang Gug Park (Iduk University, Korea)  
Dae Hyun, Ryu (Hansei University, Korea)  
Kim, Seong Cheol (Sangmyung University, Korea)  
Dae-Ki Kang (Dongseo University, Korea)  
Chang Soo, Ryu (Yewon Arts University, Korea)  
Kim, Byun-Gon (Kunsan National University, Korea)  
Cho, Hyun Cheol (Ulsan College, Korea)  
Sangook Moon (Mokwon University, Korea)  
Howon Kim (Pusan National University, Korea)  
Seong-Yoon Shin (Kunsan National University, Korea)  
A. S. M. Sanwar Hosen (Chonbuk National University, Korea)  
Kangsoo You (Jeonju University, Korea)  
SangHo Moon (Pusan University of Foreign Studies, Korea)  
Chan-bong Park (Mokwon University, Korea)  
Am-Suk Oh (Dongmyung University, Korea)  
Young Woon Woo (Dongueui University, Korea)  
Young-Uhg Lho (Silla University, Korea)  
Chang Soo Kim (Pukyong National University, Korea)  
Natalya Korobova (National Research University of Electronic Technology,  
Russia, Federation)  
Jung-Min (Jerry) Park (Virginia Polytechnic Institute & State University, U.S.A)  
Hong K. Sung (University of Central Oklahoma, U.S.A)  
Boyan Iliev Tatarov (Dongwoo Optron, Bulgaria)  
Sanghyuk Lee (Xi'an Jiaotong-Liverpool University, China)  
Changji Wang (Sun Yat-sen University, China)  
Mingui Sun (University of Pittsburgh, U.S.A)  
Hong Seung Ko (The Kyoto College of Graduate Studies for Informatics, Japan)  
Deepti Gaur (ITM University Gurgaon, India)  
Tayfun Akgul (Istanbul Technical University, Turkey)  
Genaro Saavedra (University of Valencia, Spain)  
Hiroshi Yoshikawa (Nihon University, Japan)  
Arun Anand (Maharaja Sayajirao University of Baroda, India)  
Eriko Watanabe (University of Electro-Communications, Japan)  
Manuel Martinez-Corral (University of Valencia, Spain)  
Yingmin Jia (Beihang University, China)  
Du Junping (Beijing University of Posts and Telecommunications, China)

Hee-hyol Lee (Waseda University, Japan)  
Baek-Young Choi (University of Missouri, U.S.A.)  
Cao Yang (Eastern Liaoning University, China)  
Rahman Ahad (University of Dhaka, Bangladesh)  
Chia-Yen Chen (Khaoshiung University, Taiwan)  
Hui Chen (Jinan University, China)  
Chen, Yuh-Shyan (National Taipei University, Taiwan)  
Chang, Chih-Yung (Tamkang University, Taiwan)  
M. L. Dennis Wong (Swinburne University of Technology, Malaysia)  
Zhongping Que (Taiyuan University of Technology, China)  
Yujia Zhai (Xian Jiaotong Liverpool University, China)  
M. L. Dennis Wong (Swinburne University of Technology Sarawak, Malaysia)  
Zhongping Que (Taiyuan University of Technology, China)  
Yujia Zhai (Xi'an Jiaotong-Liverpool University, China)  
Xiaofeng Niu (Taiyuan University of Technology, China)  
Ka Lok Man (Xi'an Jiaotong-Liverpool University, China)  
T. O. Ting (Xian Jiaotong-Liverpool University, China)

# Contents

## Part I Communication System and Application

<b>1</b>	<b>Dispersion Managed Optical Links with Randomly Distributed Residual Dispersion Per Span for 960 Gbps WDM Transmission . . . . .</b>	<b>3</b>
	Seong-Real Lee	
<b>2</b>	<b>In-Band MAC-Layer Sensing for the Cognitive Radio Networks . . . . .</b>	<b>11</b>
	Xiang Gao and Hyung-Kun Park	
<b>3</b>	<b>Design of Circular Patch Microstrip Antenna for 2.4 GHz RFID Applications . . . . .</b>	<b>21</b>
	Yuwono Rudy, Adiguna Baskoro and Achmad Dahlan Erfan	
<b>4</b>	<b>Vitalization of E-Marketplace to Strengthen Trade Between Korea and China in Electronic Commerce. . . . .</b>	<b>29</b>
	Sangwon Lee, Hyun-Chang Lee, Seong Jin Park, Chan Yong Jin and Seong-yoon Shin	
<b>5</b>	<b>Marketing and Inventory Managements in Smart Phone Environment . . . . .</b>	<b>37</b>
	Seong-yoon Shin, Hyun-Chang Lee, Sangwon Lee, Chan Yong Jin and Chenlin Xu	
<b>6</b>	<b>Relationship Between Car Color and Car Accident on the Basis of Chromatic Aberration . . . . .</b>	<b>45</b>
	Seong-yoon Shin, Yang-Won Rhee, Dai-Hyun Jang, Sangwon Lee, Hyun-Chang Lee and Chan Yong Jin	

<b>7</b>	<b>Feasibility Study of 32 Trellis-Coded OFDM Waveform for Tactical Information Communication. . . . .</b>	<b>53</b>
	Byounggi Kim, Cheolhun Na and Sangjin Ryoo	
<b>8</b>	<b>Quantization Error According to Bit Truncation Method in 4k-FFT Algorithm . . . . .</b>	<b>63</b>
	Sangjung Ra, Dongjoon Choi, Namho Hur, Sangjin Ryoo and Cheolsung Kim	
<b>9</b>	<b>Channel Compensation of Variable Symbol Timing Offset in Non-synchronized OFDM System . . . . .</b>	<b>73</b>
	Jae-Ho Lee, Dong-Joon Choi, Nam-Ho Hur and Whan-Woo Kim	
<b>10</b>	<b>Comparison of Job Scheduling Policies in Cloud Computing . . .</b>	<b>81</b>
	Yang Cao, CheulWoo Ro and JianWei Yin	
<b>11</b>	<b>Robust Observer Based Model Predictive Control of a 3-DOF Helicopter System. . . . .</b>	<b>89</b>
	Yujia Zhai	
<b>12</b>	<b>Improving Cell Phone Based Gait Identification with Optimal Response Time Using Cloudlet Infrastructure . . . . .</b>	<b>101</b>
	Thang Hoang, Viet Vo, Chuyen Luong, Son Do and Deokjai Choi	
<b>13</b>	<b>Logical Analysis of Discrete Event System Using Compositional Minimization . . . . .</b>	<b>111</b>
	Wan-Bok Lee	
<b>14</b>	<b>Accurate Indoor Positioning Technique Using RSSI Assisted Inertial Measurement . . . . .</b>	<b>121</b>
	Wallace Wong, Lin Shen Liew, Chean Hung Lai and Llewellyn Liu	

**Part II   Networking and Services**

<b>15</b>	<b>An Efficient Access Control Mechanism for Application Software Using the Open Authentication . . . . .</b>	<b>133</b>
	Seon-Joo Kim, Jin-Mook Kim and In-June Jo	
<b>16</b>	<b>Tracking Multi-Objects in Web Camera Video Using Particle Filtering. . . . .</b>	<b>141</b>
	Yang Weon Lee	

<b>17</b>	<b>Mutual Authentication Scheme for Cloud Computing . . . . .</b>	<b>149</b>
	Shirly Lee, Tae Yong Kim and Hoon-Jae Lee	
<b>18</b>	<b>A Novel Algorithm for Detection of Elephant Flows: Landmark-LRU with Recycle . . . . .</b>	<b>159</b>
	Yunki Choi and Jinoo Joung	
<b>19</b>	<b>ISPM: An Improved Secure Payment Mechanism to Prevent the Black Hole Attack and Selfish Node in WMN . . . . .</b>	<b>169</b>
	Junguo Liao and Junwen Li	
<b>20</b>	<b>Analysis of Internet Banking Security Crack Through Messenger Hacking. . . . .</b>	<b>179</b>
	Dea-Woo Park and Kyong-Ha Roo	
<b>21</b>	<b>Routing Approach in IPv6 Ubiquitous Internet-Based Home Automation Network. . . . .</b>	<b>189</b>
	Ardiansyah Musa Efendi, Oh Seung Kyo, Ali Fahmi Perwira Negara, Thang Hoang and Deokjai Choi	
<b>22</b>	<b>A Network-Based IP Mobility Management Scheme with IPv4/IPv6 Dual Stack Support. . . . .</b>	<b>199</b>
	Kyoung-Hee Lee, Hoe-Kyung Jung, Hyun-Woo Lee, Sung-Kuen Lee and Youn-Hee Han	
<b>23</b>	<b>Network System Based on M2M for Efficient Visual Information Service . . . . .</b>	<b>209</b>
	Min-Ho Jeon and Chang-Heon Oh	
<b>24</b>	<b>A Study of Technical Strategy for Tourism Social Network Services from the Viewpoint of Acceptance Decision Factor . . . .</b>	<b>219</b>
	Hyun-Jee Park, Young-Ha Kim and Am-Suk Oh	
<b>25</b>	<b>Web Based CDN Structure for Smart Devices . . . . .</b>	<b>229</b>
	Yu-Doo Kim and Il-Young Moon	

### **Part III Intelligent Information System**

<b>26</b>	<b>A New User Adaptive Pointing and Correction Algorithm . . . . .</b>	<b>237</b>
	Jung-Jae Jo and Young-Chul Kim	

<b>27</b>	<b>Design of Real-Time MAC Protocol for Road Traffic Status Provision Using Sensor Networks . . . . .</b>	<b>245</b>
	Whoijin Jung, Jae Yong Lee and Byung Chul Kim	
<b>28</b>	<b>Enhancing Document Clustering Using Reweighting Terms Based on Semantic Features . . . . .</b>	<b>257</b>
	Sun Park, Jin Gwan Park, Min A Jeong, Jong Geun Jeong, Yeonwoo Lee and Seong Ro Lee	
<b>29</b>	<b>Time-Delay Neural Network with 3 Frequency Bands Based on Voiced Speech Discrimination in Noise . . . . .</b>	<b>265</b>
	Jae Seung Choi	
<b>30</b>	<b>Linear Prediction-Based Reconstruction of Electrocardiogram with Premature Ventricular Contraction for Heart Rate Variability Analysis . . . . .</b>	<b>273</b>
	Nipon Theera-Umpon, Panyaphon Phiphatkhunarnon and Sansanee Auephanwiriyaikul	
<b>31</b>	<b>EDISON Platform: A Software Infrastructure for Application-Domain Neutral Computational Science Simulations. . . . .</b>	<b>283</b>
	Jung-Lok Yu, Hoon Ryu, Hee-Jung Byun, Jongsuk Ruth Lee, Kumwon Cho and Du-Seok Jin	
<b>32</b>	<b>Application of Web Search Results for Document Classification . . . . .</b>	<b>293</b>
	So-Young Park, Juno Chang and Taesuk Kihl	
<b>33</b>	<b>Similarity Measure Design for Non-Overlapped Data. . . . .</b>	<b>299</b>
	Sanghyuk Lee	
<b>34</b>	<b>A Vehicle Recognition Using Part-Based Representations. . . . .</b>	<b>309</b>
	Myungseon Hwang and Hyunchul Kang	
<b>35</b>	<b>Wind Turbine Performance Monitoring Based on Hybrid Clustering Method . . . . .</b>	<b>317</b>
	Frank I. Eljorje, Daesun Moon, Seokil Ahn, Sungho Kim and Jaewan Lee	
<b>36</b>	<b>Intelligent Road Control and Monitoring. . . . .</b>	<b>327</b>
	Vladimir Hahanov, Wajeb Gharibi, Ka Lok Man, Eugenia Litvinova, Svetlana Chumachenko and Olesya Guz	

**Part IV Multimedia and Digital Convergence**

<b>37</b>	<b>Improvement in Waterproof Effect of Speaker Enclosure. . . . .</b>	<b>339</b>
	Han-Kil Kim, Seung-Eui Yang and Hoe-Kyung Jung	
<b>38</b>	<b>An Adjustment Method of a Convergence Point for Zoom-In on a Dual Lens Stereoscopic Camera. . . . .</b>	<b>349</b>
	JongSoo Ha, ChaeHoon Ban, DaeWoong Kim and Tatsuro Ishii	
<b>39</b>	<b>Reliability-Based Selective Encoding in Pixel-Domain Wyner-Ziv Residual Video Codec . . . . .</b>	<b>359</b>
	Jin-soo Kim and Jae-Gon Kim	
<b>40</b>	<b>A Mobile Navigation System with Vibration Flow . . . . .</b>	<b>369</b>
	Sang-Youn Kim and Gilho Song	
<b>41</b>	<b>A Design and Development of Korean Traditional Board Game on Android Environment . . . . .</b>	<b>379</b>
	Yang-Jib Kim, Seung-Woo Kang and Teuk-Seob Song	
<b>42</b>	<b>Study on the Librarian Helper Robot System Implementation . . .</b>	<b>389</b>
	Sang-Gug Park	

**Part V Semiconductor and Communication Services**

<b>43</b>	<b>Device Degradation Under High Gate and Drain Bias Stress in IGZO Transistors. . . . .</b>	<b>401</b>
	Hyun Jun Jang, Seung Min Lee and Jong Tae Park	
<b>44</b>	<b>2D Analysis of Breakdown Voltages for Device Dimension of Double Gate MOSFET Using Nonlinear Doping Profile . . . . .</b>	<b>409</b>
	Hakkee Jung and Dongsoo Cheong	
<b>45</b>	<b>Analysis on Off-Current of Double Gate MOSFET for Composition of Forward and Backward Current . . . . .</b>	<b>419</b>
	Hakkee Jung and Jongin Lee	
<b>46</b>	<b>A HW/SW Co-Design Implementation of Viola-Jones Algorithm for Driver Drowsiness Detection . . . . .</b>	<b>427</b>
	Kok Choong Lai, M. L. Dennis Wong and Syed Zahidul Islam	

<b>47</b>	<b>Analysis of Subthreshold Characteristics for Doping Concentration of DGMOSFET Using Series Form of Potential . . . . .</b>	<b>437</b>
	Jihyeong Han, Hakkee Jung, Ohshin Kwon and Choonshik Park	
<b>48</b>	<b>A Parasitic-Insensitive Charge Transfer Circuit for Capacitive Sensing Based on Switched Capacitor Integrator . . . . .</b>	<b>445</b>
	Hyeop-Goo Yeo, Eu-Sung Jung and Seung-Min Jung	
<b>49</b>	<b>Calculation 15-Fold Integrals by Method of Optimal Coefficients for Small Values of the Numbers of Knots Quadrature Formulas . . . . .</b>	<b>453</b>
	Saule Zamanova	
<b>50</b>	<b>Effect of the Filler on the Physico-Mechanical Properties of the Polyimide Composite Materials . . . . .</b>	<b>461</b>
	A. D. Muradov, G. S. Suyundikova and A. G. Kunsafina	
<b>51</b>	<b>Strong Self-Pulsations in a Multi-Electrode Distributed Feedback Laser Integrated With an Electro-Absorption Modulator . . . . .</b>	<b>467</b>
	Jun-Hyung Cho, Seo Weon Heo and Hyuk-Kee Sung	
<b>52</b>	<b>Radiation Modification of the Structure of Nanosized Metal Powders . . . . .</b>	<b>471</b>
	M. Zh. Buranbaev, B. A. Aliev, U. P. Koztaeva, G. Partizan, Zh. Entibekov, Zh. Nakysbekov and M. Aitzhanov	
<b>53</b>	<b>Effect of Low-Temperature Annealing on the Optical Properties of Composite Material, the System “Polyimides: <math>\text{YBa}_2\text{Cu}_3\text{O}_{6,7}</math>” . . . . .</b>	<b>477</b>
	A. D. Muradov, S. S. Kumarova and Zh. K. Sakhiyeva	
<b>54</b>	<b>Preparation and Application of PZT Films in Microelectronics . . . . .</b>	<b>483</b>
	S. Timishenkov, V. Vodopyanov, Yu Stepanova, Yu Cherkasova and N. Korobova	
<b>55</b>	<b>Study of the Stress–Strain State in the Bare Crystals in Technology Implementation of Internal Mounting . . . . .</b>	<b>491</b>
	Timoshenkov Sergey, Dolgovykh Yu, A. Titov, K. Tikhonov and D. Vertyanov	

**Part VI Imaging and Biomedical Engineering**

<b>56</b>	<b>A Micro-Scale Solar Energy Harvesting Circuit with MPPT Control for Self-Powered Systems . . . . .</b>	<b>499</b>
	Eun Jung Yoon and Chong Gun Yu	
<b>57</b>	<b>Multi-View Stereoscopic Image Synthesis Algorithm for 3DTV . . . . .</b>	<b>509</b>
	Hyunjun Choi, Youngho Seo, Jisang Yoo and Dongwook Kim	
<b>58</b>	<b>Cell Image Segmentation by Contour Following Method with Directional Angle . . . . .</b>	<b>519</b>
	Cheolhun Na, Sangjin Ryoo, Suyeong Kim and Seongjun Kang	
<b>59</b>	<b>Performance Improvement of Vehicle Tracking Using Parts Features Adaboost . . . . .</b>	<b>525</b>
	Jingyu Do, Jangsik Park and Hyuntae Kim	
<b>60</b>	<b>A Study on the Selection of ROI and Trace Under the Multiple Object Environments . . . . .</b>	<b>533</b>
	Gwangseok Lee, Gangin Hur and Youngsub Kim	
<b>61</b>	<b>Edge Detection Using Modified Directional Coefficient Mask in AWGN . . . . .</b>	<b>543</b>
	Chang-Young Lee and Nam-Ho Kim	
<b>62</b>	<b>An Intra Prediction Hardware Architecture with Low Computational Complexity for HEVC Decoder . . . . .</b>	<b>549</b>
	Hongkyun Jung and Kwangki Ryoo	
<b>63</b>	<b>A Color Gamut Mapping System Using the RGB Primaries and White-Point Correction for a Wide Gamut Display Device . . . . .</b>	<b>559</b>
	Kyounghoon Jang, Hosang Cho, Hyunjung Kang and Bongsoon Kang	
<b>64</b>	<b>A Region of Interest Labeling Algorithm Using Three Mask Patterns . . . . .</b>	<b>569</b>
	Hosang Cho, Kyounghoon Jang, Changhoo Kim and Bongsoon Kang	
<b>65</b>	<b>Multi-Factor Authentication Process Using More than One Token with Watermark Security . . . . .</b>	<b>579</b>
	Arjun Kumar and Hoon Jae Lee	

## Part VII Ubiquitous Sensor Network

<b>66</b>	<b>Energy Based Interference Avoidance Scheme in Ubiquitous Medical Environments . . . . .</b>	<b>591</b>
	Jin-Woo Kim, Myeong Soo Choi, Yeonwoo Lee, Beommu Kim, Seyeong Maeng, Seongmin Jeon, Shyuk Park and Seong Ro Lee	
<b>67</b>	<b>Technical Analysis of Stock Trading Point in Electronic Commerce . . . . .</b>	<b>599</b>
	Jinwon Park, Sangwon Lee, Chan Yong Jin, Hyun-Chang Lee, Do Goan Kim and Seong-yoon Shin	
<b>68</b>	<b>ADC Design for Neural Acquisition Application . . . . .</b>	<b>607</b>
	Ruoyuan Qu, Zhe Guo, Na Liu, Yueyang Chen and Xinghua Wang	
<b>69</b>	<b>Design of Microstrip Patch Antenna Using Inset-Fed Layered for Metallic Object in u-Port . . . . .</b>	<b>615</b>
	Chan-Hong Park, Jong-Dae Park, Byeong-Ho Park, Myung-Dong Kim, Yong-Seok Choi and Hyeon-Kyeong Seong	
<b>70</b>	<b>An Analysis on the Effects of Cluster Leadership Rotation Among Nodes Using Least Temperature Routing Protocol . . . . .</b>	<b>625</b>
	Nico Encarnacion and Hyunho Yang	
<b>71</b>	<b>Performance Analysis of Tag Identification Method Based on Multi-Reader Using Anti-Collision Algorithm . . . . .</b>	<b>635</b>
	Bong-Im Jang, Chang-Su Kim, Hoe-Kyung Jung, Yong-Tae Kim and Gil-Cheol Park	
<b>72</b>	<b>Segregated Lightweight Dynamic Rate (SLDR) Control Scheme for Efficient Internet Communications . . . . .</b>	<b>645</b>
	T. O. Ting, H. C. Ting and Sanghyuk Lee	
<b>73</b>	<b>Remote Sensing of Asian Dust at DaeJeon Station in NIES Lidar Network . . . . .</b>	<b>653</b>
	Chan Bong Park, Young Woo Lee, Atsushi Shimizu and Nobuo Sugimoto	
<b>74</b>	<b>Transmission Range Determination with a Timeslot-Based Energy Distribution Scheme for Solar-Energy Harvesting Sensor Systems . . . . .</b>	<b>661</b>
	Dong Kun Noh	

<b>75</b>	<b>A New Algorithm for Solving the Energy Conservation Equation Based on ADI Method . . . . .</b>	<b>671</b>
	Xiaofeng Niu, Zhongping Que and Weili Cheng	
<b>76</b>	<b>Sensor Prioritization and Decisive Sensing: A Conservative Power Saving Scheme for BSNs . . . . .</b>	<b>679</b>
	Frank I. Elijorde, Hyunho Yang and Jaewan Lee	
<b>77</b>	<b>A Study of Optimal Path Availability Clustering Algorithm in Ad Hoc Network. . . . .</b>	<b>689</b>
	Young-jun Oh, Dong-keun Oh and Kang-whan Lee	
<b>78</b>	<b>Localized Positioning Method for Optimization Path Availability Clustering Algorithm in Ad Hoc Network . . . . .</b>	<b>697</b>
	Young-jun Oh, Dong-keun Oh and Kang-whan Lee	
<b>79</b>	<b>Performance Analysis of Routing Algorithm Based on Link Quality in Wireless Sensor Networks . . . . .</b>	<b>705</b>
	Hyun-Jun Shin and Chang-Heon Oh	
<b>80</b>	<b>Low Latency and Collision Avoidance MAC Protocol in Wireless Multimedia Sensor Networks. . . . .</b>	<b>715</b>
	Seong Cheol Kim, Hyun Joo Park and Jun Heon Jeon	
<b>81</b>	<b>A QoS and Throughput Enhancement MAC Protocol in Wireless Sensor Networks. . . . .</b>	<b>723</b>
	Seong Cheol Kim	
 <b>Part VIII Database and Internet Application</b>		
<b>82</b>	<b>The Proposed on Model-Based User Interface Modules . . . . .</b>	<b>733</b>
	Chul-Hyun Hwang, Zhu Jiang, Sung-Han Kim, Seung-Yun Lee and Hoe-Kyung Jung	
<b>83</b>	<b>A Study on Design and Implementation of the Web-Based Real-Time Video Communication System . . . . .</b>	<b>743</b>
	Tae-Hak Ban, Chang-Su Kim and Hoe-Kyung Jung	
<b>84</b>	<b>Comprehensive Analysis of Data Clustering Algorithms. . . . .</b>	<b>753</b>
	Deepti Gaur and Seema Gaur	

<b>85</b>	<b>The Student Safety Network Service System Using the Location-Based Services of Smartphone. . . . .</b>	<b>763</b>
	Chang-Su Ryu and Chang-Wu Hur	
<b>86</b>	<b>Design of an Inventory Management System for Refrigerated Warehouses on Mobile Environments . . . . .</b>	<b>773</b>
	ChaeHoon Ban, DongHyun Kim, DaeSoo Cho, Jinoh Choi, Jindeog Kim and Sungwoo Ahn	
<b>87</b>	<b>The Design of XML-Based Software Information System Schema and Development of the Standard for Information Processing . . . . .</b>	<b>783</b>
	Chang-Su Kim, Min-Kyo In, Kang-Chan Lee, Seung-Yun Lee and Hoe-Kyung Jung

## Chapter 52

# Radiation Modification of the Structure of Nanosized Metal Powders

M. Zh. Buranbaev, B. A. Aliev, U. P. Koztaeva, G. Partizan,  
Zh. Entibekov, Zh. Nakysbekov and M. Aitzhanov

**Abstract** The structure of nano-sized copper powders, before and after irradiation with high-energy electrons in the dose range 1–10 Mrad, has been studied using the methods of electron microscopy, small-angle X-ray scattering and X-ray photography. New structural phases with different lattice types and parameters have been detected.

**Keywords** Nanopowders · Electron microscopy · Small-angle X-ray scattering · X-ray

### 52.1 Introduction

It is known that fundamental properties of different materials change in their nanosized state. A rapid development of nanotechnology in the past two decades has contributed to an increase in the interest of researchers to the study of properties and characteristics of external influences on the structure and properties of materials at the nanometer level. This interest stems primarily from the possibility of using nanopowders in the field of advanced materials and technologies, brand new appliances and devices. Basic physical properties of metal nanoparticles differ significantly from the properties of metals in the normal bulk state and in many cases are unique. In these systems, interesting combinations of electrical, magnetic, thermal, superconducting, mechanical and other properties, not found in bulk materials, have been discovered [1].

## 52.2 Experimental Part and Discussion

At the present time, to explain specific features of physical properties of metal nanoparticles the so-called “jellium” model is used, which assumes that clusters of alkali and rare-earth metals have a shell electronic structure [2, 3] similar to the shell structure of atomic nuclei. The presence of the shell electronic structure is confirmed by the experimental studies of the dependence of properties of metal clusters on the number of atoms in the cluster.

This paper presents the results of studies of the structure of nanosized copper powders, obtained by electric explosion of conductors [4]. Using a scanning electron microscope Quanta 200i 3D, the sizes of copper particles, having a spherical shape of radii ranging from 30 nm to 300 microns (Fig. 52.1), were determined. The particle size distribution in the studied powders was determined by the method of small-angle X-ray scattering on the diffractometer Hecus S3-Micro. Figure 52.2 shows the average particle size distribution. Stable clusters of particles of a definite size are formed as a result of action of the following factors:

- (a) Passage of a voltage of about 40 kV through the chamber with a 0.03 m long,  $3 \times 10^{-4}$  m thick, piece of wire, which causes disruption of conduction electrons, and even electrons of the outer shells. The disruption of the outer shells of electrons leads to the Coulomb explosion [5, 6] and formation of nanoparticles, between the atoms of which multiple (covalent) bonds are formed. The size of nanopowders is determined by the supplied energy.
- (b) The interaction of delocalized electrons and the nucleus of the nanoparticle causes formation of superatoms [2, 3], having a smaller radius than the radius of ordinary atoms, which leads to formation of new phases with smaller parameters of a unit cell.
- (c) Another factor is the structure that defines the stable shape and size of the cluster, i.e. determines the minimum and maximum density.

**Fig. 52.2** The dependence of the volume function of the particle size distribution

X-ray studies of copper powders were made on the diffractometer DRON-2 M using  $\text{CuK}\alpha$  radiation. The X-ray diffraction pattern of a copper monolith (Fig. 52.3) has clearly visible peaks corresponding to the reflections from the (111), (200), (220) and (311) planes of FCC copper structure with the lattice size smaller than that of nanopowders. The X-ray photograph also has a low diffraction peak at a small angle, which may correspond to defects in the crystal structure.

Figure 52.4 presents the experimental X-ray diffraction data of non-irradiated copper powders, which show that peaks (111) and (200) have shoulders and an additional complex peak at small angles. The calculations showed that the peak observed at an angle  $2\theta = 35.07$  corresponds to the reflection from the plane (100). It is known that the peak of (100) plane can be observed only in the presence of a phase with a primitive cubic lattice, which is not observed in bulk copper crystals.

The experiments were carried out in air, and, hence, the superatoms having the same properties as metal atoms were covered by an oxide layer. The relatively low peaks, located between the peaks from (200) and (220) planes correspond to the reflections from copper oxides  $\text{CuO}$  and  $\text{Cu}_2\text{O}$ . These results indicate that the

**Fig. 52.3** A diffraction pattern of the copper monolith

**Fig. 52.4** Diffraction pattern of unirradiated copper nanopowder

crystal structure of copper nanopowders is significantly different from that of the monolith.

The splitting of the peaks can be attributed to the presence of clusters with different lattice parameters or the existence of several crystalline phases.

The authors [4] suppose that structural changes in small particles are caused by the increase in their surface energy, which makes a considerable fraction of the volume energy. Therefore, in order to reduce the total energy of the system it may be advantageous to make such a deformation of the crystal, in which the decrease in the surface energy compensates the increase in the volume energy. In the simplest case, such a deformation is reduced to a change in the lattice constant of the crystal, which is often observed experimentally. For a more detailed study of specific features of the structure, the studied powders were irradiated by various doses of 2 meV electrons. The irradiation was carried out in a vacuum chamber on the nano-electron accelerator ELU-4. Figure 52.5 shows the diffraction pattern of the copper powder, irradiated by electrons to absorbed doses of 1 Mrad, which

**Fig. 52.5** Diffraction pattern of nanopowder copper irradiated to absorbed dose 1 Mrad

**Table 52.1** Experimental parameters of Cu nanoparticles irradiated to a dose of 1 Mrad

Lattice type	$P$	$F_1$	$F_2$
Cluster radius, nm	8	12	16
Atomic radius, Å	1.2743	1.3158	1.2859
Lattice parameter, Å	2.5486	3.7218	3.6371
Residual electron shells of atoms	$3d^8$	$3d^{10}$	$3d^9$

shows that peaks of (111) and (200) become narrower, and their splitting becomes more clearly seen.

The splitting of peaks, typical of the FCC copper structure, indicates the appearance of two new phases due to different radii of atoms, which, in turn, depend on the number of delocalized electrons. Reflections from the (100) plane may occur only in the presence of clusters with a primitive cubic lattice. In order to determine parameters of various phases, the radii of atoms in clusters were calculated, the results of calculations are presented in Table 52.1. The difference in the values of atomic radii is probably due to the fact that different clusters are formed by atoms with different numbers of delocalized valence electrons.

A clear splitting of peaks shows that electron irradiation causes changes in the electron structure of atoms and clusters with quantitative redistribution of different structures. It increases the number of clusters with a strictly defined number of atoms corresponding to magic numbers. When a sample is irradiated with a dose of 5 Mrad (Fig. 52.6) the peak of the (100) plane increases, which shows that the electron irradiation causes an increase in the number of clusters with the coordination number 6 or a primitive cubic lattice among the powder particles. Figure 52.7 shows the diffraction pattern of the copper powder, irradiated to a dose of 10 Mrad, which shows that splitting of (111) and (200) peaks vanishes, and the (100) peak becomes lower. Such intensive exposure to ionizing radiation leads to radiation fragmentation of nanoparticles, which, firstly, causes formation of particles of optimal size (magic number), and, secondly, agglomeration of nanoparticles.

**Fig. 52.7** Diffraction pattern of copper nanopowder irradiated to an absorbed dose of 10 Mrad

### 52.3 Conclusion

It has been established that nano-sizes depend significantly on the electron structure of atoms, and therefore several different structural phases can coexist. The presence of three crystalline phases was detected. A new copper phase with a primitive cubic lattice, not typical of bulk copper crystals, was discovered.

It was found out that at low irradiation doses the ordering processes in the existing crystalline phases dominate, which is caused by the increase in the number of clusters with a stable electron structure of atoms. An increase in the irradiation dose causes, due to the Coulomb explosion [5, 6], splitting of nanoparticles to the magic numbers, as the most stable structures, and agglomeration of nanoparticles.
