This Plant Breeder's New Year Resolution. Bring on 2016

January 3, 2016

•

[2 comments](#)

I David L. Benson, PhD have reviewed my 10 Plant Breeding rules in detail and I make this vow to my followers and others in the seed industry. In 2016 I will do my best to follow these rules and I will continue to interject more creativity and innovation in my plant breeding program(s) while I continue to chase perfection and by default capture excellence in plant improvement.

In 2016 I will work to create and/or modify new Top Ten Rules for Plant Breeders by including information on Genomics, Phenomics, Robotics, exciting developments in Ag Tech, etc and bringing more species of plants and traits of interest into the discussion. I hope you will continue to follow and root for me and these posts as we all learn how to better improve the breeding methodology and increase the rate of genetic gain on the crops we all work with and the traits we need in the market area where they are needed.

As always, if anyone has any questions, concerns or comments don't hesitate to let me know.

If you have questions in regards to what I can do for your breeding program or any part of your business visit www.cornhuskerhybrids.com or email consulting@cornhuskerhybrids.com

Chair of Department of Genetics & Mol.Biol. at Faculty of Biology al-Farabi Kazakh National University

Great! Ten rule principle is fully mathematicians- (see Ph.Burne's rules for PI's, doing graduate research, commercialization, online edu, etc. we at al-Farabi Kazakh Natl Uni are discussing during the Critical Thinking classes) as geneticists' "Silk Road": precise but always and inevitably individual, and thereby imposing countless versions, case studies, amendments, delays in case of more important deeds, and suggesting such a supplements as: i, 10 rules for assessing adopted 10 rules for breeders; ii, 10 rules for newcoming, inexperienced breeders; 10 rules for the editorials publishing breeding outcomes; 10 rules for the latters commercialization; 10 rules for their licencing; 10 rules for abolishing initial 10 rules under the emergencies; 10 rules for the breeders classroom games and separate 10 rules for the interviewing before breeders employment (better divided into those for the interviewers; interviewees; accompanying members of hiring board). So there will be great and innovative way to raise a new wave of interest to both forward and reverse genetics, breeding, folks traditional foods, pharmacies and further 10-ruling scientific methodology without borders.
