

# CS 143: Introduction to Computer Vision

Instructor: James Hays

TAs: Hari Narayanan (HTA), Libin “Geoffrey” Sun,  
Greg Yauney, Bryce Aebi, Charles Yeh, Kurt Spindler

# Today's Class

- Introductions
- What is Computer Vision?
- Computer Vision at Brown
- Specifics of this course
- Questions

# A bit about me

# Thesis: Large Scale Scene Matching for Graphics and Vision

---

## Thesis

[hays\\_thesis.pdf](#), 107MB

## Committee

- **Alexei A. Efros** (chair)
- **Martial Hebert**
- **Jessica K. Hodgins**
- **Takeo Kanade**
- **Richard Szeliski**, Microsoft Research

# Scene Completion

[Hays and Efros. Scene Completion Using Millions of Photographs.  
SIGGRAPH 2007 and CACM October 2008.]

Nearest neighbor scenes from database of 2.3 million photos

Graph cut + Poisson blending

# My Research

---

IM2GPS: estimating geographic information from a single image

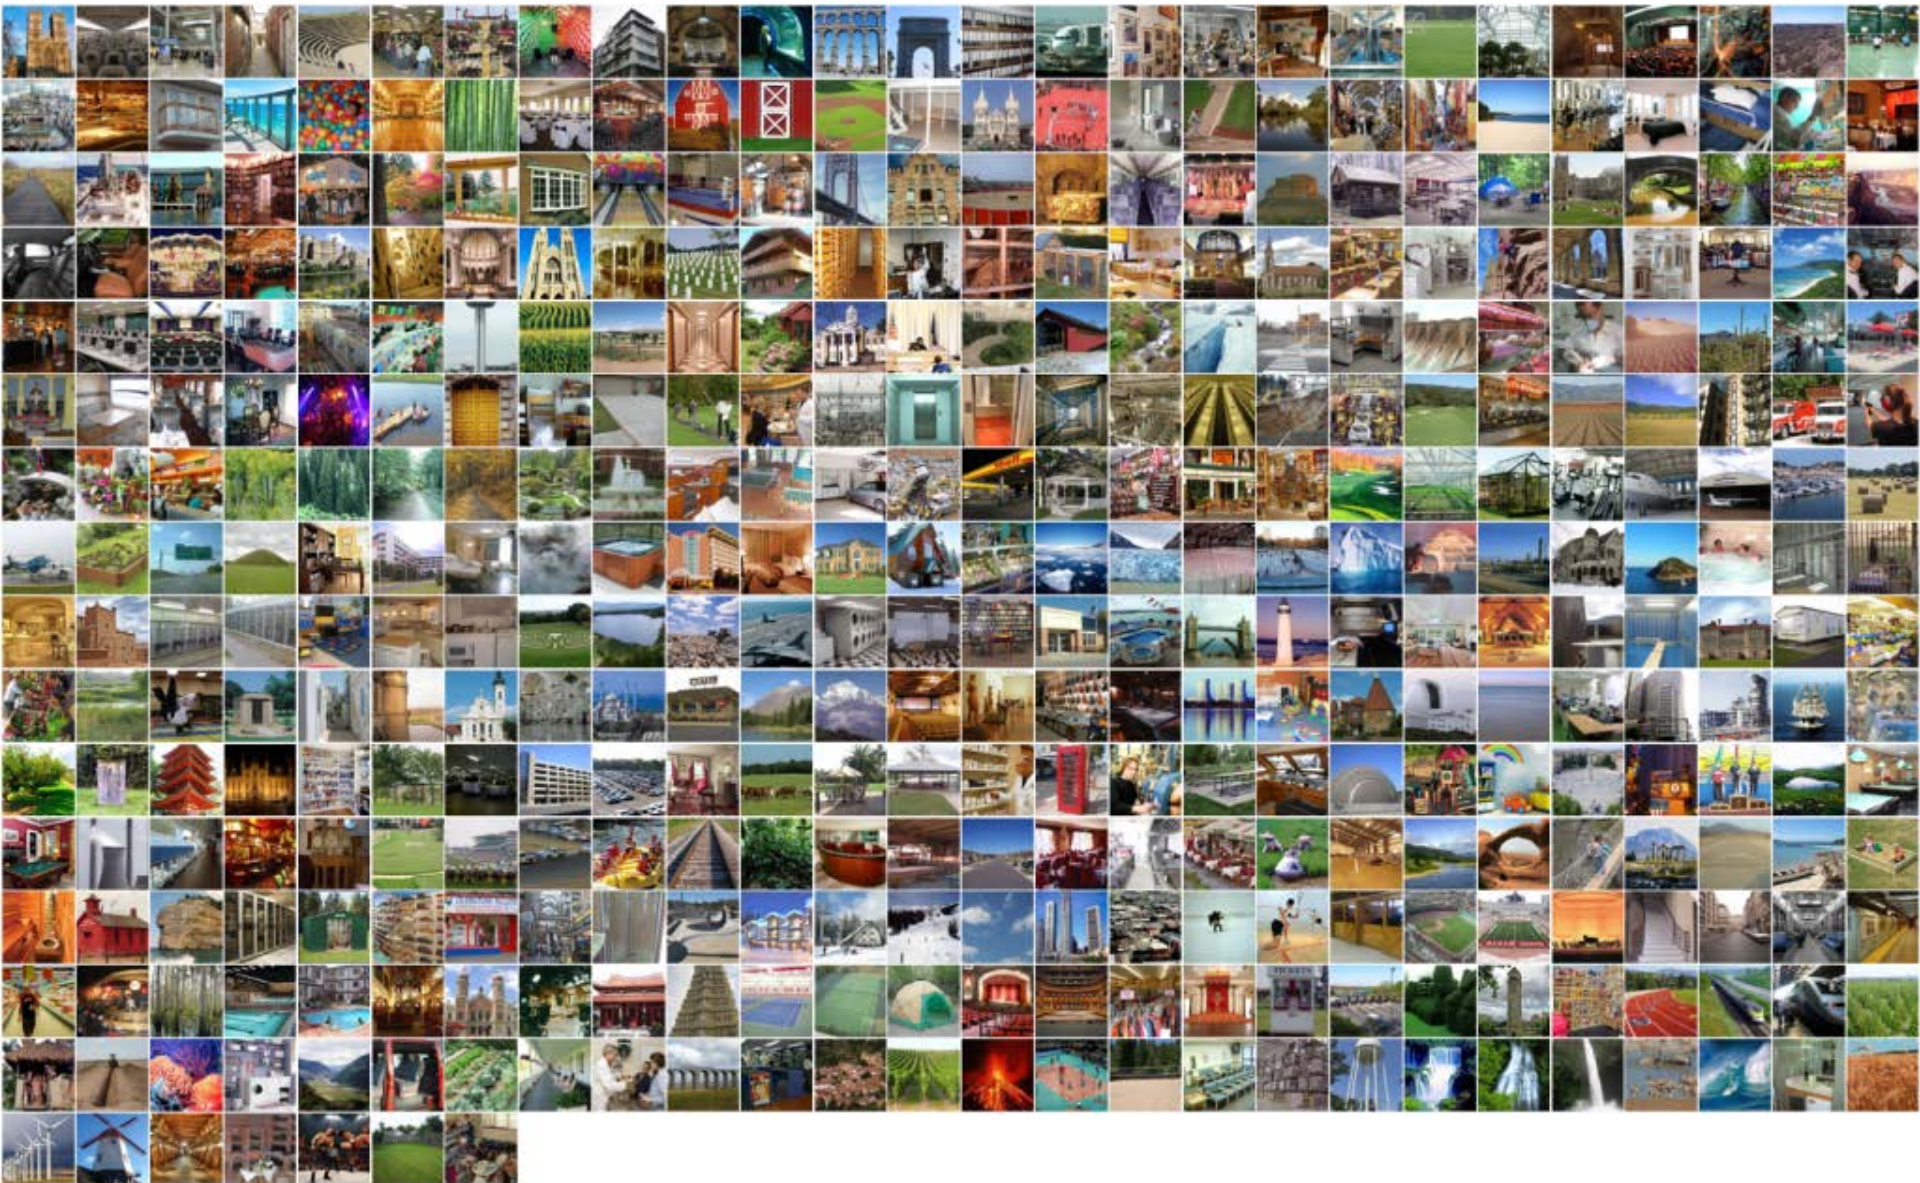

An Empirical Study of Context in Object Detection

# Categories of the SUN database

# What is Computer Vision?

- What are examples of computer vision being used in the world?

# Computer Vision

Make computers understand images and video.

What kind of scene?

Where are the cars?

How far is the building?

...

# Vision is really hard

- Vision is an amazing feat of natural intelligence
  - Visual cortex occupies about 50% of Macaque brain
  - More human brain devoted to vision than anything else

# Why computer vision matters

Safety

Health

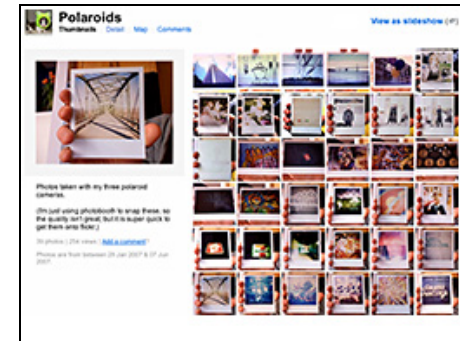

Security

Comfort

Fun

Access

# Ridiculously brief history of computer vision

- 1966: Minsky assigns computer vision as an undergrad summer project
- 1960's: interpretation of synthetic worlds
- 1970's: some progress on interpreting selected images
- 1980's: ANNs come and go; shift toward geometry and increased mathematical rigor
- 1990's: face recognition; statistical analysis in vogue
- 2000's: broader recognition; large annotated datasets available; video processing starts
- 2030's: robot uprising?

Ohta Kanade '78

Turk and Pentland '91

# How vision is used now

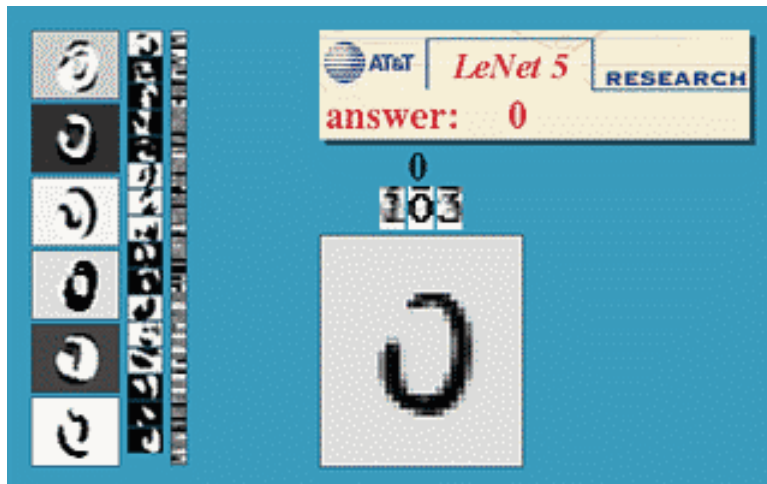

- Examples of state-of-the-art

# Optical character recognition (OCR)

Technology to convert scanned docs to text

- If you have a scanner, it probably came with OCR software

Digit recognition, AT&T labs

License plate readers

[http://en.wikipedia.org/wiki/Automatic\\_number\\_plate\\_recognition](http://en.wikipedia.org/wiki/Automatic_number_plate_recognition)

# Face detection

- Many new digital cameras now detect faces
  - Canon, Sony, Fuji, ...

# Smile detection

## The Smile Shutter flow

Imagine a camera smart enough to catch every smile! In Smile Shutter Mode, your Cyber-shot® camera can automatically trip the shutter at just the right instant to catch the perfect expression.

# 3D from thousands of images

# Object recognition (in supermarkets)

## [LaneHawk by EvolutionRobotics](#)

“A smart camera is flush-mounted in the checkout lane, continuously watching for items. When an item is detected and recognized, the cashier verifies the quantity of items that were found under the basket, and continues to close the transaction. The item can remain under the basket, and with LaneHawk, you are assured to get paid for it... “

# Vision-based biometrics

# Smart cars

Slide content courtesy of Amnon Shashua

The screenshot displays the Mobileye website interface. At the top, there are navigation tabs for 'manufacturer products' and 'consumer products'. The main header reads 'Our Vision. Your Safety.' Below this, a top-down view of a car is shown with three camera fields of view: 'rear looking camera', 'side looking camera', and 'forward looking camera'. The bottom section features three product highlights: 'EyeQ Vision on a Chip' with an image of the chip, 'Vision Applications' showing a pedestrian detection box, and 'AWS Advance Warning System' with a circular display showing a car icon and a distance of 0.8. On the right side, there are sections for 'News' and 'Events', each with a list of recent articles and a 'read more' link.

- [Mobileye](#)

# Grading

- 80% programming projects (5 total)
- 20% quizzes (2 total)

# Scope of CS 143

Computer Vision

Robotics

Human Computer Interaction

Machine Learning

Image Processing  
Feature Matching  
Recognition

Graphics

Medical Imaging

Computational Photography

Neuroscience

Optics

# Course Topics

- Interpreting Intensities
  - What determines the brightness and color of a pixel?
  - How can we use image filters to extract meaningful information from the image?
- Correspondence and Alignment
  - How can we find corresponding points in objects or scenes?
  - How can we estimate the transformation between them?
- Grouping and Segmentation
  - How can we group pixels into meaningful regions?
- Categorization and Object Recognition
  - How can we represent images and categorize them?
  - How can we recognize categories of objects?
- Advanced Topics
  - Action recognition, 3D scenes and context, human-in-the-loop vision...

# Textbook

## Computer Vision: Algorithms and Applications

© 2010 [Richard Szeliski](http://szeliski.org), Microsoft Research

<http://szeliski.org/Book/>

# Prerequisites

- **Linear algebra**, basic calculus, and probability
- Experience with image processing or Matlab will help but is not necessary

# Projects

- Image Filtering and Hybrid Images
- Local Feature Matching
- Scene Recognition with Bag of Words
- Object Detection with a Sliding Window
- Boundary Detection with Sketch Tokens

# Proj1: Image Filtering and Hybrid Images

- Implement image filtering to separate high and low frequencies
- Combine high frequencies and low frequencies from different images to create an image with scale-dependent interpretation

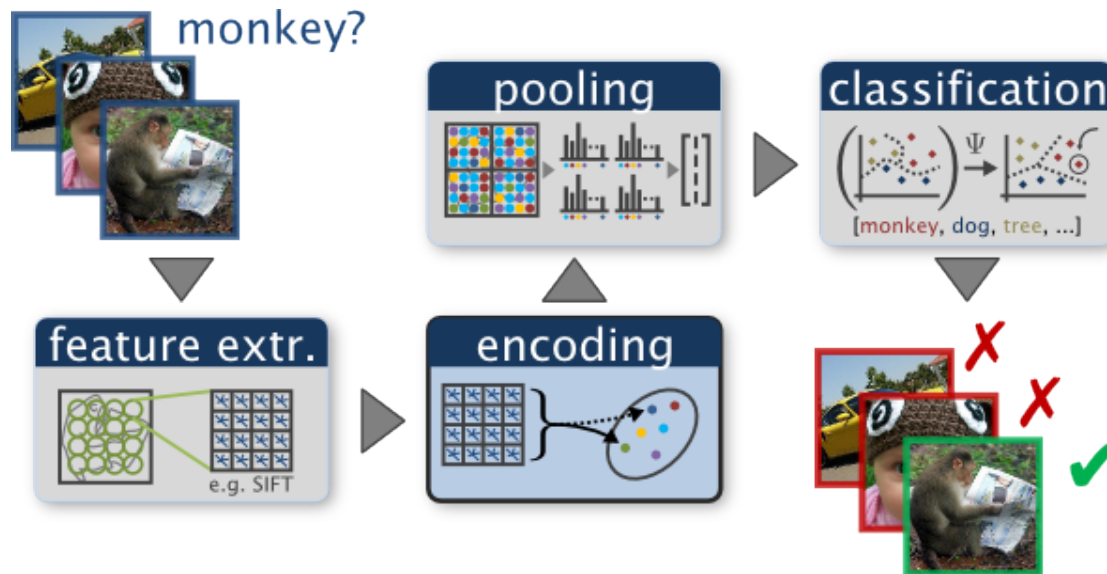

# Proj2: Local Feature Matching

- Implement interest point detector, SIFT-like local feature descriptor, and simple matching algorithm.
- Feed feature matches to a structure-from-motion system

# Proj3: Scene Recognition with Bag of Words

- Quantize local features into a “vocabulary”, describe images as histograms of “visual words”, train classifiers to recognize scenes based on these histograms.

# Proj4: Object Detection with a Sliding Window

- Train a face detector based on positive examples and “mined” hard negatives, detect faces at multiple scales and suppress duplicate detections.

# Proj5: Boundary Detection with Sketch Tokens

- Quantize human-annotated boundaries into “sketch tokens”, train a multi-way classifier to recognize such tokens.
