Department of Fundamental Medicine

PO2204 General pathology

**Instructions for tutorials**

№	Tutorial topic, content, tasks	Max point
<b>GENERAL PATHOLOGY</b>		
<b>1-2</b>	<p><b>General aspects of disease:</b> Introduction to Pathology. Discipline of Pathology.</p> <ol style="list-style-type: none"> <li>1. <i>Define and use in proper context following terms:</i></li> <li>2. <i>brain death, diagnosis, differential diagnosis, disease, etiology, exacerbation, factitious, functional, abnormality, iatrogenic, idiopathic, idiopathic, lesion, morphology, mortality rate, natural history, nosocomial, pathogenesis, pathognomonic, prognosis, psychosomatic, remission, sign, somatic death, structural abnormality, symptom, syndrome.</i></li> <li>3. <i>Distinguish between disease and non-disease.</i></li> <li>4. <i>Outline a classification of causes of disease, basic responses of the body to injury, and manifestations of disease; and classify common examples in each category.</i></li> <li>5. <i>State the three most common causes of death in your country.</i></li> </ol> <p><b>Cellular Responses to Stress and Toxic Insults 1:</b> Cause of cell injury. Overview of cell injury and cell death. Cellular adaptations to stress. <u>General questions:</u> Categories of cause of cell injury. Mechanism of cell injury. Reversible cell injury. Mechanisms of adaptation. Pathogenesis of Hyperplasia, Hypertrophy, Atrophy, Metaplasia.</p> <ol style="list-style-type: none"> <li>1. <i>Define and use in proper context: agenesis, anthracosis, aplasia, apoptosis, atrophy, autolysis, autophagy, bilirubin, cellular swelling, (hydropic change), Dysplasia, Gangrene, heat-shock protein, hemosiderin, hemosiderosis, heterophagy, homeostasis, hyaline (hyalin), hyperplasia, hypertrophy, hypoplasia, hypoxia, infarct, ischemia, karyolysis, karyorrhexis, lipofuscin, melanin, metaplasia, necrosis, neoplasia, pyknosis, steatosis,</i></li> <li>2. <i>Compare cell and tissue adaptation, reversible cell injury, and irreversible cell injury (cell death) on the basis of: etiology, pathogenesis, morphologic appearance (ultrastructural and histologic);</i></li> <li>3. <i>Compare and contrast cell death and somatic death, on the basis of: causes, pathogenesis, histologic appearance;</i></li> <li>4. <i>Outline the relationships between: biochemical, light microscopic, ultrastructural changes in the processes of cell injury and death</i></li> <li>5. <i>Compare: coagulative (coagulation) necrosis, liquefactive (liquefaction) necrosis, gangrenous nec by rosis, caseous necrosis, fat necrosis, fibrinoid necrosis, apoptosis</i> <i>in terms of: -common sites or tissues involved and reasons for this; -common causes or causative mechanisms; -gross and microscopic appearance; -types and extent of healing</i></li> <li>6. <i>Compare and contrast the following types of cell injury: reperfusion, free radical-induced, chemical, in terms of biochemical and molecular mechanisms</i></li> </ol> <p><b>Images:</b> Hypertrophy of myocyte – 099, 108 Atrophy of myocyte (Lipofuscin granules in cardiac myocytes) – 043, 189 Metaplasia of columnar to squamous epithelium in a bronchus - 004, Fatty liver – 052, 160</p>	10

	<p>Benign prostatic hyperplasia – 003, 163,  Swelling of proximal convoluted tubule – 077,  Nodular hyperplasia in cortex of adrenal glands – 063, 208  Hyperplasia of pancreatic islets – 197  Myocardial infarction - 001, 162  Necrosis of proximal convoluted tubule – 006, 247  Necrosis of adipose tissue - 194  Lung infarction– 008, 087  Renal infarct – 225  Brain infarct - 100  Gangrene of the small intestine – 213</p> <p>Recommended Articles for Discussion:</p> <ol style="list-style-type: none"> <li>7. Review Article: Cellular and molecular mechanisms of muscle atrophy Paolo Bonaldo, Marco Sandri <i>Disease Models &amp; Mechanisms</i> 2013 6: 25-39; doi: 10.1242/dmm.010389</li> <li>8. Review Article: Mechanisms and Strategies to Counter Muscle Atrophy Elisabeth Barton, Carl Morris <i>The Journals of Gerontology: Series A</i>, Volume 58, Issue 10, October 2003, Pages M923–M926, <a href="https://doi.org/10.1093/gerona/58.10.M923">https://doi.org/10.1093/gerona/58.10.M923</a></li> <li>9. Review Article: Muscle Atrophy Induced by Mechanical Unloading: Mechanisms and Potential Countermeasures Yunfang Gao and all. <i>Front. Physiol.</i>, 20 March 2018   <a href="https://doi.org/10.3389/fphys.2018.00235">https://doi.org/10.3389/fphys.2018.00235</a></li> <li>10. Brain Atrophy Is Associated with Disability Progression in Patients with MS followed in a Clinical Routine. E. Ghione, N. Bergsland, M.G. Dwyer, J. and R. Zivadinov <i>American Journal of Neuroradiology</i> November 2018, DOI:<a href="https://doi.org/10.3174/ajnr.A5876">https://doi.org/10.3174/ajnr.A5876</a></li> <li>11. Contribution of normal aging to brain atrophy in MS. Christina J. Azevedo, Steven Y. Cen. <i>Neurology Neuroimmunology Neuroinflammation</i> November 2019; 6 (6) DOI: <a href="https://doi.org/10.1212/NXI.0000000000000616">https://doi.org/10.1212/NXI.0000000000000616</a></li> <li>12. <i>Review Article</i>: Cell death: Apoptosis versus necrosis. <u><i>International Journal of Oncology</i></u> 21(1):165-70 · July 2002. DOI: 10.3892/ijo.21.1.165</li> <li>13. Fat necrosis in the Breast: A systematic review of clinical. <u>Narges Vasei, Azita Shishegar, Forouzan Ghalkhani. <i>Lipids in Health and Disease</i></u> volume 18, Article number: 139 (2019)</li> </ol>	
3-4	<p><b>Cellular Responses to Stress and Toxic Insults II:</b> Pathogenesis and morphologic patterns of Intracellular accumulation.  <u>General questions:</u> Mechanism of extracellular and intracellular accumulation.  Morphologic patterns of Pathologic calcification: dystrophic calcification, metastatic calcification.</p> <ol style="list-style-type: none"> <li>1. <i>Define and use in proper context: lipofuscin, melanin, metaplasia, necrosis, neoplasia, pyknosis, steatosis,</i></li> <li>2. <i>List the types of subcellular alterations that can occur in cell injury, with respect to the following organelles: lysosomes, endoplasmic reticulum, mitochondria, cytoskeleton</i></li> <li>3. <i>Discuss the significance of intracellular accumulations of: lipids, proteins, glycogen, pigments (exogenous and endogenous)</i></li> <li>4. <i>Compare fatty change (steatosis) and fatty infiltration on the basis of: causes, pathogenesis, organs commonly involved, histologic appearances</i></li> <li>5. <i>Compare dystrophic and metastatic calcification in terms of: definition, etiology and pathogenesis, morphologic appearance, sites and associated diseases, clinical significance</i></li> </ol> <p><b>Images for I:</b>  Lipofuscin granules in cardiac myocytes – 043, 189  Fatty liver - 052, 160</p>	10

	<p>Fatty change in heart – 044, 140, 228,  Hemosiderin granules in liver cells – 031  Hemosiderin granules in lung - 085  Hemosiderin granules in brain – 179,  Cholestasis - 250</p> <p><b>Images for II:</b>  Nephrocalcinosis – 013,  Atherosclerosis – 014, 126, 249  Cartilage calcinosis – 064, 088  Calcinosis of mitral valve – 062  Calcinosis in brain – 080, 157  Calcinosis of the cerebral meninges – 089,  Coronary artery calcification - 251  Coal pigment aggregates in pulmonary parenchyma – 012, 047</p> <p>Recommended Articles for Discussion:</p> <ol style="list-style-type: none"> <li>1. An Overview of the Role of Lipofuscin in Age-Related Neurodegeneration Alexandra Moreno-García, Alejandra Kun, [...], and Miguel Calero. <i>Frontiers in Neuroscience</i>, 2018: 12: 464.</li> <li>2. Specificity and Sensitivity of Hemosiderin-Laden Macrophages in Routine Bronchoalveolar Lavage in Children. Zeynep N. Salih, MD, Afreen Akhter, BA, and Javeed Akhter, MD. <u><i>Archives of Pathology &amp; Laboratory Medicine</i></u>, Volume 130, Issue 11 (November 2006).</li> <li>3. Iron homeostasis in the liver. Anderson ER, Shah YM. Iron homeostasis in the liver. <i>Compr Physiol</i>. 2013;3(1):315–330. doi:10.1002/cphy.c120016</li> <li>4. REVIEW ARTICLE: The Involvement of Iron in Traumatic Brain Injury and Neurodegenerative Disease. Maria Daglas <i>Front. Neurosci.</i>, 20 December 2018   <a href="https://doi.org/10.3389/fnins.2018.00981">https://doi.org/10.3389/fnins.2018.00981</a></li> </ol>	
5-6	<p><b>Hemodynamic Disorders</b> 1: Pathophysiologic categories of the oedema. Pathogenesis and morphologic patterns of hyperemia and congestion. Pathogenesis of hemorrhage. Pathophysiologic categories of hemorrhage. Classification of hemorrhage.  <u>General questions:</u> Hemodynamic disorders. Oedema. Increased hydrostatic pressure. Lymphatic obstruction. Sodium and water retention. Hyperemia and congestion. Pathogenesis and morphologic patterns of hemorrhage.</p> <ol style="list-style-type: none"> <li>1. <i>Define and use in proper context: hyperemia, congestion, congestive heart failure, edema, inflammatory, noninflammatory, renal, lymphedema, anasarca, effusion, ascites, exudate, transudate</i></li> <li>2. <i>Compare and contrast active hyperemia and passive congestion, in terms of:</i> <ul style="list-style-type: none"> <li>• <i>mechanisms of development</i></li> <li>• <i>clinically important examples</i></li> </ul> </li> <li>3. <i>Describe chronic passive congestion of:</i> <ul style="list-style-type: none"> <li>• <i>lungs</i></li> <li>• <i>liver</i></li> <li>• <i>kidneys</i></li> <li>• <i>spleen</i></li> </ul> </li> <li>4. <i>in terms of:</i> <ul style="list-style-type: none"> <li>• <i>morphologic features</i></li> <li>• <i>functional alterations</i></li> </ul> </li> <li>5. <i>Discuss the pathogenesis of edema, giving examples associated with the following mechanisms:</i> <ul style="list-style-type: none"> <li>• <i>altered plasma oncotic pressure</i></li> <li>• <i>inflammation</i></li> <li>• <i>venous obstruction/stasis</i></li> <li>• <i>lymphatic obstruction</i></li> </ul> </li> <li>6. <i>and classify each in terms of localized vs. generalized</i></li> </ol>	10

	<p>7. Compare edema of:</p> <ul style="list-style-type: none"> <li>• subcutaneous tissue</li> <li>• lungs</li> <li>• brain</li> <li>• kidneys</li> </ul> <p>8. on the basis of:</p> <ul style="list-style-type: none"> <li>• pathogenesis</li> <li>• morphologic changes</li> <li>• clinical effects</li> </ul> <p>9. Compare acute and chronic hemorrhage in terms of:</p> <ul style="list-style-type: none"> <li>• common causes</li> <li>• clinical manifestations</li> <li>• compensatory mechanisms</li> </ul> <p>10. Compare and contrast bleeding due to:</p> <ul style="list-style-type: none"> <li>• vascular defect (localized or generalized)</li> <li>• platelet defect</li> <li>• coagulation defect</li> </ul> <p>11. in terms of:</p> <ul style="list-style-type: none"> <li>• etiologic/precipitating factors</li> <li>• common sites of occurrence</li> <li>• organs commonly involved</li> <li>• type and size of vessels involved</li> <li>• results, complications, and fate of lesions</li> <li>• clinical features</li> <li>• laboratory findings</li> </ul> <p><b>Images:</b></p> <p>Pulmonary edema – 226, 240  Acute pneumonia – 058, 161, 178  Chronic passive congestion in lung – 085, 091  Acute paranephritis – 081  Acute meningitis - 153  Fibrosis of liver – 175  Hemorrhage in brain – 007,  Hemorrhage in stomach – 074  An organized thrombus - 128  Gastric Ulcer - 130  Aortic laceration – 156, 188</p> <p>Recommended Article for Discussion:</p> <p>1. TOPICAL REVIEW. Local control of blood flow during active hyperaemia: what kinds of integration are important? Coral L. Murrant. The Journal of Physiology 593.21 (2015) pp 4699-4711</p>	
7	<p><b>Hemodynamic disorders 2: Pathogenesis of Haemostasis and thrombosis. Embolism. Shock.</b></p> <p><u>General questions:</u> Normal hemostasis. Antithrombotic properties. Prothrombotic properties. Platelets. Coagulation cascade. Thrombosis. Embolism. Infarction. Shock. Major types of shock. Stages of shock.</p> <p>1. Describe thrombi in terms of:</p> <ul style="list-style-type: none"> <li>• types of thrombotic material</li> <li>• factors conditioning the development of thrombi</li> <li>• possible fate of thrombi</li> </ul> <p>1. Distinguish between venous thrombi and arterial thrombi on the basis of:</p> <ul style="list-style-type: none"> <li>• etiologic and precipitating factors</li> </ul>	10

- *common sites of occurrence*
  - *type and size of vessel involved*
  - *morphologic appearance*
  - *organs commonly involved*
  - *local and distant effects*
  - *fate of lesions and prognosis*
  - *clinical and laboratory features*
2. *Compare the following types of emboli:*
- *arterial thrombotic*
  - *venous thrombotic*
  - *paradoxical*
  - *fat*
  - *bone marrow*
  - *atheromatous*
  - *air tumor*
  - *amniotic fluid*
  - *foreign body*
2. *in terms of:*
- *defining morphologic features*
  - *etiologic/precipitating factors*
  - *common sites of occurrence*
  - *organs commonly involved*
  - *type and size of vessels involved*
  - *complications*
  - *fate of lesion*
  - *common clinical manifestations*
3. *Compare and contrast arterial and venous infarcts on the basis of:*
- *location*
  - *pathogenesis*
  - *morphology*
  - *clinical manifestations*
4. *Describe the morphologic appearance and natural history of infarcts of:*
- *heart kidney*
  - *lung spleen*
  - *bowel brain*
3. *Describe the following stages of shock:*
- *non-progressive (compensated)*
  - *progressive (decompensated)*
  - *irreversible*
4. *in terms of:*
- *pathophysiology*
  - *morphologic changes*
  - *prognosis*
5. *Compare and contrast the following types of shock:*
- *neurogenic*
  - *normovolemic*
  - *hypovolemic*
  - *hemorrhagic*
  - *septic*
  - *cardiogenic*
  - *anaphylactic*
6. *in terms of:*
- *pathogenic mechanism*
  - *common causes*
  - *structural changes*
  - *functional changes*

	<ul style="list-style-type: none"> <li>• <i>clinical features and prognosis</i></li> </ul> <p>7. <i>List the morphologic changes and functional effects of shock on:</i></p> <ul style="list-style-type: none"> <li>• <i>lungs</i></li> <li>• <i>kidneys</i></li> <li>• <i>adrenals</i></li> <li>• <i>brain</i></li> <li>• <i>gastrointestinal tract</i></li> </ul> <p><b>Images:</b></p> <p>Red thrombus – 116, 120, 149  Thrombus (organization) - 128  Thrombosis of small vessels in system of pulmonary - 143  Pulmonary embolism – 010, 252  Pulmonary infarction - 008, 087  Pulmonary tumor embolism – 236, 237  Amniotic fluid emboli - 009  Tumor embolism – 246  Myocardium infarction – 001  Pulmonary infarction - 008, 060, 087  Kidney infarction - 225</p> <p><b>Recommended Articles for Discussion:</b></p> <ol style="list-style-type: none"> <li>1. Acute pulmonary embolism: a concise review of diagnosis and management. <u>Hepburn-Brown M, Darvall J, Hammerschlag G.</u> <i>Intern Med J.</i> 2019 Jan;49(1):15-27. doi: 10.1111/imj.14145.</li> <li>2. Thrombosis: a major contributor to global disease burden. Raskob GE, Angchaisuksiri P et al. <i>Arterioscler Thromb Vasc Biol.</i> 2014; 34: 2363-2371</li> <li>3. The economic burden of incident venous thromboembolism in the United States: a review of estimated attributable healthcare costs. Grosse SD, Nelson RE, Nyarko KA, Richardson LC, Raskob GE. <i>Thromb Res.</i> 2016; 137: 3-10.</li> <li>4. Epidemiology of venous thromboembolism. Heit JA. <i>Nat Rev Cardiol.</i> 2015; 12: 464-474</li> <li>5. Epidemiology of cancer-associated venous thrombosis. Timp JF, Braekkan SK, Versteeg HH, Cannegieter SC <i>Blood.</i> 2013; 122: 1712-1723</li> <li>6. Genetics of venous thrombosis: update in 2015. Morange P.E, Suchon P, Trégouët D.A <i>Thromb Haemost.</i> 2015; 114: 910-919</li> <li>7. Silent pulmonary embolism in patients with deep venous thrombosis: a systematic review. Stein PD, Matta F, Musani MH, Diaczok B. <i>Am J Med.</i> 2010; 123: 426-431</li> </ol>	
8	<p><b>Acute inflammation I:</b> Overview of inflammation. Stimuli of inflammation. Vascular changes. Cellular events: leukocyte recruitment and activation. Leukocyte-induced tissue injury. Morphologic patterns of acute inflammation  <u>General questions:</u> Pathogenesis and Morphologic patterns of Serous inflammation and Fibrinous inflammation.</p> <p><b>Acute inflammation II:</b> Overview of inflammation. Stimuli of inflammation. Vascular changes. Cellular events: leukocyte recruitment and activation. Leukocyte-induced tissue injury. Morphologic patterns of acute inflammation.  <u>General questions:</u> Pathogenesis and Morphologic patterns of purulent inflammation.</p> <ol style="list-style-type: none"> <li>1. <i>Define and use in proper context: abscess, autocrine, cellulitis, chemotaxis, cytokine, edema, effusion, emigration, endocrine, erosion, exudate, fibrinous, granulation tissue, granuloma, inflammation, margination, paracrine, phagocytosis, purulent, pus, pyogenic, resolution, serosanguineous, serous, suppurative, transudate, ulcer</i></li> <li>2. <i>Describe the classic vascular changes and cellular events of the inflammatory reaction.</i></li> </ol>	5

3. *Discuss the five cardinal signs of inflammation in terms of pathogenesis and underlying morphologic changes.*
4. *Discuss the following chemical mediators of inflammation, in terms of origin (cells vs. plasma) and chief in vivo functions:*
  - *vasoactive amines*
  - *nitric oxide*
  - *proteases of clotting, kinin, complement systems*
  - *lysosomal granule contents*
  - *arachidonic acid metabolites*
  - *oxygen-derived free radicals*
  - *platelet activating factor*
  - *neuropeptides*
  - *cytokines/chemokines*
5. *Discuss each of the following in terms of the associated type of inflammation and their role therein:*
  - *platelets*
  - *lymphocytes*
  - *giant cells*
  - *mast cells/basophils*
  - *plasma cells*
  - *fibroblasts*
  - *neutrophils*
  - *eosinophils*
  - *cell adhesion molecules*
  - *endothelial cells*
  - *monocytes/macrophages/histiocytes*
6. *Compare and contrast acute, chronic, and granulomatous inflammation in terms of:*
  - *etiology*
  - *pathogenesis*
  - *histologic appearance*
  - *laboratory findings*
  - *characteristic cells involved*
  - *outcome*
  - *systemic effects*
7. *Compare and contrast resolution and organization with respect to the termination of an inflammatory response.*
8. *Develop and utilize the nomenclature used to describe inflammation in the various tissues and organs*

**Images:**

Serous pneumonia - 015, 219  
 Serous meningitis - 153  
 Fibrinous pericarditis – 042  
 Fibrinous perisplenitis - 076  
 Acute pneumonia – 058, 139, 161, 174, 178  
 Acute perisplenitis – 076  
 Acute pericarditis – 104, 107, 111  
 Acute nephritis – 039, 081  
 Purulent meningitis - 261  
 Peritonitis – 082, 215, 218, 244, 245  
 Cerebral abscess - 176  
 Renal abscess – 039  
 Lung abscess, acute bronchitis, acute pleuritis – 069  
 Acute pneumonia – 058, 139, 161, 174, 178

**Tissue Renewal, Regeneration, and Repair II:** Control of cell proliferation. Pathologic aspects of repair: Sclerosis, Fibrosis, Cirrhosis.

10

General questions: Proliferative capacities of tissues – continuously dividing tissues, stable tissues, permanent tissues.

1. *Compare and contrast:*
  1. *resolution*
  2. *regeneration*
  3. *repair*
  4. *organization*
2. *in terms of:*
  1. *type of antecedent injury*
  2. *tissue involved*
  3. *cellular response*
  4. *time course*
  5. *ultimate outcome*
  6. *classic/common examples of each*
3. *Describe the four steps of tissue repair, including the cell types and growth factors involved, and the approximate timetable for the tissue repair process.*
4. *Discuss the role of each of the following in the repair reaction:*
  1. *cell migration*
  2. *integrins*
  3. *growth factors*
5. *Describe the role of each of the following in the process of wound healing:*
  1. *myofibroblasts*
  2. *endothelial cells*
  3. *fibroblasts*
  4. *macrophages*
  5. *collagen*
6. *Compare healing by first intention (primary union) and second intention (secondary union) in terms of time, sequence of events, morphologic changes, and final outcome.*
7. *Describe the local and systemic factors that influence wound healing, stating whether each of these influences accelerates or retards the rate of healing.*
8. *List the complications of wound healing.*

**Images:**

**General Pathology of Infectious diseases 1: Mechanism of bacterial Injury. Mechanism of Viral Injury.**

10

General questions: Etiology, pathogenesis and morphologic pattern of Tuberculosis, Syphilis. Actinomycosis, Echinococcosis, Trichinellosis.

1. *List three general ways in which infectious agents damage tissues*
2. *Discuss the different mechanisms of dissemination and transmission of microbial organisms.*
3. *Discuss the different mechanisms of bacterial-induced cellular and tissue injury including mechanisms of adhesions, exotoxins, and endotoxins.*
4. *Compare endotoxins and exotoxins based on:*
  1. *sources*
  2. *effects*
  3. *immunologic response*
5. *Discuss the significance of:*
  1. *pyogenic inflammation*
  2. *granulomatous inflammation*
  3. *caseous necrosis*
  4. *gangrene*
  5. *liquefactive necrosis*
  6. *lymphocytic reaction*
  7. *plasmacytic reaction*
  8. *eosinophil reaction*
  9. *pseudomembranous reaction*
  10. *cytopathic/cytoproliferative reaction*
6. *in terms of:*
  1. *possible causative agents*
  2. *mechanism of reaction*
  3. *morphologic features*
7. *Identify granulomatous inflammation and enumerate special stains needed to differentiate infectious etiologies thereof*
8. *Compare and contrast the following types of infectious diseases:*
  1. *bacterial*
  2. *mycobacterial*
  3. *fungus*
  4. *rickettsial*
  5. *viral*
  6. *protozoan*
  7. *helminthic*
  8. *prion*
9. *in terms of:*
  1. *histologic reaction*
  2. *organ and tissue distribution*

<b>15</b>	<b>Colloquium -3 Quiz on topics 11-14</b>	8

### **Methodical instruction for tutorials**

**Aim:** integrated knowledge of pathophysiological processes and morphological changes in organs, tissues, cells, ultrastructures in the event of the development and

outcomes of pathological processes and diseases; understanding of immunopathogenesis of diseases developing due to inadequacy of the immune system; principles of immunization, immunodiagnostics and immunotherapy; to provide a stimulating and challenging learning environment where teaching is informed and enhanced by research, and to provide training in scientific principles and experience in the evaluation and practice of research.

**Learning outcomes:**

1. Demonstrate understanding of the basic concepts of general nosology, sanogenesis, thanatogenesis;
2. Demonstrate understanding of the pathogenesis and morphogenesis of typical pathological processes (hypoxia, impaired peripheral circulation, inflammation, regeneration, wound healing, sclerosis, fibrosis, allergic reactions, oncoprocess).
3. Value and possibilities of modeling pathological processes and experimental therapy in animals in the study of human diseases. General principles of construction of biomedical experiments.
4. Demonstrate analytical skills in the integration of knowledge on pathophysiology, pathological anatomy, and immunology in the formation of judgments regarding general pathology.
5. To be able to interpret the results of specific immunodiagnostics and apply knowledge of immunodiagnostics and immunoprophylaxis
6. Understand the pathogenesis of the development of immunodeficiency states and primary immunodeficiencies, immunopathological states (inflammation, oncopathology, autoimmune and allergic diseases)
7. Understand the principles of histocompatibility and interaction of the graft and host (graft and host)
8. Demonstrate the ability to identify learning gaps and create strategies to enhance one's own knowledge and skills.
9. Effectively communicate with other students and teachers regarding medical and scientific information, articulate their opinions clearly when discussing pathophysiological processes and their impact, and work effectively as a member of the team

**Plan of preparation work for each lesson**

1. Work with the basic and additional literature, use textbooks, the syllabus and present instructions, Internet resources to prepare for tutorials.
2. Be prepared for class and participate actively on case-discussion and problem-solving group activities.
3. Work carefully with microscope and micro-slides and prepare your descriptions.
4. Use the examples (in this number cases and your own experience studied before) for illustration of theoretic material.
5. Use different tools for studying, discussion and visualization of thoughts - drawing, mind maps, 3d-modelling.
6. Use the group work with cases for the development of team work skills, communication, problem solving and self-studying.

№	Grading Criteria	level			
		4 excellent 90-100	3 good 75- 89	2 satisfied 50-74	1 fail 49 - 0
1.	Level of understanding of the pathological process	20	17	14	0
2.	Understanding of changes in the tissue	20	17	14	0
3.	Knowledge of relevant theories regarding pathological process	20	17	14	0
4.	Choice of examples	20	17	14	0
5.	Knowledge of professional terminology	20	17	14	0
	<b>Total</b> <b>Maximum score – 100</b>				

### Oral Survey (Immunopathology)

№	Grading Criteria (Immunopathology)	level			
		4 excellent 90-100	3 good 75- 89	2 satisfied 50-74	1 fail 49 - 0
1.	Level of understanding of the topic	20	17	14	0
2.	Ability to make informed conclusions	20	17	14	0
3.	Compliance of the material with the questions posed	20	17	14	0
4.	Confirmation of the answer with concrete examples and facts	20	17	14	0
5.	Knowledge of professional terminology	20	17	14	0
	<b>Total</b> <b>Maximum score - 100.</b>

### **SOME TIPS ON TEAMWORK AND LEARNING<sup>1</sup>**

The medical profession involves working in multidisciplinary teams, so these skills are identified as key in the competence of the doctor and other health professionals in all countries.

Therefore, group work is included as an essential component in the practical exercises of our course. In addition, it aims to provide a safe environment in which you can try out new ideas and practices and acquire relevant group skills. These can be tasks for performance in pairs, triples or small groups of 4-6 people (work with cases, tasks of the ISW, etc.).

When you are working on a project or task in a team, you have the opportunity to use the various strengths of the group members to create a wider and better project or task than if you were working independently.

Group training means you need to share your knowledge and ideas with other students. There are two benefits to this: you need to think carefully about your own ideas in order to explain them to others, and you expand your own understanding, taking into account the knowledge and ideas of others.

#### **Interpersonal Communication and Discussion**

Take some time to chat and get to know each of your group mates. The better you know each other and the more convenient you communicate, the more effective you can work together.

Create a culture of mutual respect in your group. You probably had little choice or no choice at all when forming training groups and small teams in the classroom. Therefore, you will have to learn to overcome the differences between people. In addition, you will not have the opportunity to choose employees in the workplace, and at work, you will experience much greater pressure to be a productive member of the team.

---

<sup>1</sup> adapted from UNSW Guide to Group Work <https://student.unsw.edu.au/groupwork>)

For effective communication and discussion in a team: you should not be shy to express your opinion and it is important to feel that these opinions will be heard; it is necessary to feel that all members of the group make a feasible contribution to solving problems, observing agreed rules and plans, performing work efficiently and on time; it is important to know that everyone's feelings are taken into account by team members, but the goals and objectives of the group are not compromised, in favor of the whims or desires of individual members;

Try to express your opinion and listen to others. There is nothing wrong with disagreeing with your classmates, no matter how confident they are. When you disagree, be constructive and focus on the problem, not the person. Similarly, when someone disagrees with you, respect what he says and the risk that he takes upon himself to express his opinion. Try to find a way that everyone can agree with, and this is not necessarily the opinion of the loudest or smartest member of the team.

Below we provide some examples of constructive and destructive group behavior<sup>2</sup>

**Constructive group behavior** - a person who:

*Unites* - interest in the views and opinions of others and willingness to adapt to interest

*Clarifies* - clearly defines the problems for the group by listening, summarizing, focusing the discussion

*Inspires* - encourages the group, stimulates participation and progress

*Harmonizes* - stimulates group unity and teamwork. For example, uses humor as a relaxation after difficult situations.

*Take the risk* - willingness to take risks at the expense of oneself for the success of the group or project

*Manages the process* - organizes a group on the issues of the process: for example, plan, schedule, timeline, topic, solution methods, and use of information

**Destructive group behavior:**

*Domination* - takes a lot of time expressing your opinion and views. Trying to take control by capturing energy, time, etc.

*Fussiness* - hastens the group to move quickly before the task is completed. Impatient in listening to other opinions and working together.

*Suspension* - removes itself from a discussion or decision. Opt out

*Ignoring* - does not respect or belittle the ideas and suggestions of the team or individuals. An extreme manifestation of ignoring is an insult in the form of ridicule.

*Distraction* - excessive talkativeness, tells stories and leads groups away from the goal

*Blocking* - prevents group progress by denying all ideas and suggestions. "It will not work because ..."

---

<sup>2</sup> adapted from Brunt (1993): <https://tle.wisc.edu/solutions/engagement/constructive-and-destructive-groupbehaviors>

Effective group work does not arise by itself. A conscious and planned effort is needed, and since many people participate in it, one cannot rely on memory; need to make notes. **The following steps** will help you and your team work together effectively.

**1. Define clear objectives.** At each stage, you should try to coordinate the tasks. They include a timeline for the project, as well as more specific tasks (such as “agree on an approach to the task before Friday”). Each meeting or discussion should also begin with a specific goal (for example, make a list of tasks that need to be completed). Tasks should be broken down into smaller parts and planned. Sometimes one part cannot be started until the other part is finished, so you may need to draw a simple temporary map.

- discuss the resources that you have and those that you will need to find.
- formulate the desired result.
- consider how you know when you did it well enough?
- split tasks between the team and
- set deadlines for subtasks and time for future meetings.

**2. Set the basic rules.** Discussions can become erratic and can prevent more modest group members from participating if you do not have rules to stimulate discussion, resolve disagreements, and make decisions without repetition. Set the rules from the start and change them as needed. For example: an interesting rule that was developed by one group - anyone who missed a meeting would buy the rest of the group coffee in a coffee shop. No one ever missed a meeting after that.

**3. Communicate effectively.** Make sure you regularly communicate with group members. Try to be clear and positive in what you say without repeating.

**4. Find consensus.** People work together most effectively when they work towards a goal with which they have agreed. Make sure everyone has their own opinion, even if you need time to get more participants to say something. Make sure you listen to everyone’s ideas and then try to come to an agreement that everyone shares, and everyone has contributed.

**5. Define the roles.** Divide the work that needs to be done into separate tasks, for which you can use the strengths of individual team members. Define roles for both fulfilling your tasks and for meetings / discussions (for example, Aran is responsible for summarizing the discussions, Joseph is for everyone to express their opinions and make decisions, etc.).

Examples of roles and functions:

*Facilitator or leader* (depending on context) - to clarify the goals of the meeting and to summarize the discussions and decisions; ensures that the meeting takes place, continues and the basic rules are respected.

*Secretary* - keep a record of the ideas discussed and decisions made and who does what.

*Time Manager* - to make sure that you discuss everything that you need in the time allotted for the meeting.

*Controller* - to ensure that work is completed by an agreed time, and to solve problems if they are not being performed.

A *process observer* is someone who monitors the process, not the content, and can bring problems to the attention of the team. In this role, it is important to be positive, not condemning.

*Editor* - bring all materials together, identify gaps or matches and ensure consistency in the final presentation.

**6. Make it clear.** When a decision is made, it should be explained in such a way that it is clear to everyone that it was decided, including the time frame.

**7. Keep good notes.** Always summarize the discussions and document the decisions and publish them (for example in WhatsApp chat) so you can always get back to them. This includes lists of those who agreed what to do.

**8. Stick to the plan.** If you agreed to do something as part of the plan, do it. Your group relies on you to do what you agreed to do, and exactly in this way, not in the way you would like. If you think the plan should be reviewed, discuss it.

**9. Keep track of progress and keep up to date.** Discuss progress together regarding your schedule and deadlines. Make sure you meet deadlines personally, so you do not let your group down.

### **Co-writing a document / report**

Joint writing is one of the most difficult parts of group work. There are many ways to do this, and your group must decide how to separate the work of writing, comparing, editing, and finalizing your work. Writing in a group (six people crowd around the keyboard) is a recipe for conflict and lack of progress. The other extreme - when one person assumes all responsibility and ultimately does most of the work - is also unproductive and contributes to conflict.

Three approaches are possible when working on a common document:

1 - One person writes the most part - this means that a narrow circle of ideas is used, and the rest of the team does not learn (and will not learn) to write reports and documents.

2 - Each person writes one section - then it is difficult to make a single consistent report, and you will not know about the rest, except for your own section.

3- Co-writing. This is the most productive way to solve group problems and provides the greatest benefit from collaboration. For example: in each section, there is a writer and at least one reviewer, and each team member is the author of a section and a reviewer of another one.

All team members before finalization by **the editor** must review the final product. Alternatively, you can have one author with others, editors, add and review, and someone tidies the finished report.

Try to divide the writing of source documents into tasks and solve them individually or in pairs. After the first draft of the sections are written, send out all the components and read them. You will probably need to come together to discuss how to combine them so that they fit together. Any participants who were not involved in preparing the drafts can do part of this work. Then edit, improve, and polish the draft. It is convenient to collaborate on documents in Google documents.

When preparing a report / final document, regularly check the following:

- Is the purpose of the project clear from the report?

- Are the conclusions or recommendations clear?
- Do conclusions follow from the main part of the report?
- Do sections fit well?
- Does the report achieve goals (and evaluation criteria)?
- Are the necessary components sufficiently covered?

Whatever method you use, all group members must agree on the process and how they are going to maximize the collaborative approach to writing the final document.

### **Monitoring team performance and coping**

Below is a checklist that includes a list of common problems that arise in a group work. Use it regularly to identify problems before they get out of hand. If serious problems and tensions arise, use it to determine where something might go wrong. First answer each question about yourself, and then give answer to this **question** about the group. Then gather a group and discuss where, in your opinion, problems may arise, and think about how you can overcome these problems.

Each participant must complete this checklist. You should do this exercise regularly to track and improve your team's performance.

1. Answer each question regarding your teamwork.
2. Answer each question regarding the rest of the team.
3. Get together with your entire team and discuss where, in your opinion, any problems arise.
4. Discuss what you are going to do to overcome these problems.

### **Checklist for self-assessment of team effectiveness.**

You	I personally	Group as a whole	Comments
Effectively clarify your tasks and tasks at each stage?			
Evaluate the progress of work?			
We clarify and document everything that the group decided?			
We clarify who will do what and how?			
We clarify by what date each task should be done?			
Setting meeting management rules?			
Adhere to agreed rules?			
Listening to each other?			
Allow some team members to dominate?			
Allow some team members to refuse / withdraw?			

We sacrifice personal desires for the success of the team?			
Recognize the feelings of other team members?			
Making equal contributions to team progress?			
Adhere to agreed rules for writing and naming files?			

### Points and Grade

Group tasks and assignments mean that grades are given to the whole group based on the results of the work of the whole group. Everyone should be interested in ensuring the effective contribution of all members of the group and ensuring the high quality of the assignment. Sometimes, to assess the relative contribution of each to the group process, a form of peer-to-peer or peer review and a team assessment form will be used. This can be used to moderate assignment grades, or simply as a way to give feedback on your work in a group. The following are examples of student assessment criteria for team training.

<b>№</b>	<b>Student assessment criteria in practical classes</b>
1	<i>Preparation for classes:</i> He studies information focused on the case and problematic issues, uses various sources, and supports the statements with relevant links.
2	<i>Group skills and professional attitude:</i> Demonstrates excellent attendance, reliability, responsibility Takes the initiative, takes an active part in the discussion, helps the teammates, willingly takes on tasks
3	<i>Communication skills:</i> Actively listens, shows emotions according to the situation, is susceptible to non-verbal and emotional signals, shows respect and correctness in relation to others, helps to resolve misunderstandings and conflicts
4	<i>Feedback Skills:</i> Demonstrates a high level of introspection, critically evaluates oneself and colleagues, provides constructive and objective feedback in a friendly manner, accepts feedback without opposition
5	<i>Skills of critical thinking and effective learning:</i> Effectively participates in generating hypotheses and formulating problematic questions, gives relevant examples from life, skillfully applies knowledge to the problem / case under consideration, critically evaluates information, draws conclusions, explains and substantiates statements, draws diagrams and drawings, demonstrates a constant interest in the material being studied

6	<p><i>Theoretical knowledge and skills on the topic of the lesson:</i> All key aspects are presented logically; accuracy, relevance of answers to the questions posed without redundancy; integration of theoretical issues; Use of relevant examples proper use of professional terminology</p>
