*Recommended for publication by the Academic Council
of the Faculty of Physics and Technology
and RISO of Al-Farabi Kazakh National University*

Reviewers:

Doctor of technical sciences, professor *B.N. Abdysadykov*
Doctor of Physical and Mathematical Sciences, Professor *O.Yu. Prikhodko*

Authors:

Askarova A.S., Bolegenova S.A., Bolegenova S.A., Lavrishev O.A.,
Maksimov V.Yu., Maksutkhanova A.M., Shortanbayeva Zh.K.

Metrology, standardization and certification in energy sector:
manual for graduate students / A.S. Askarova, S.A. Bolegenova,
S.A. Bolegenova [et al.]. – Almaty: Qazaq University, 2019.
– 129 p.

ISBN 978-601-04-3896-5

The manual reviews the basics of metrology and metrological support: terms, physical quantities, measurement theory basic, measuring and control means, metrological characteristics, measuring and controlling electrical and magnetic quantities. The basics of standardization are outlined: development history, legal and regulatory base, international, regional and national, standardization methods, product quality. Particular attention is paid to the fundamentals of certification and conformity assessment. The manual is intended for students of technical specialties of universities, but may also be useful for undergraduates and PhD doctoral candidates.

CONTENTS

INTRODUCTION6

SECTION I

Metrology as the science of measurement

Chapter 1. BASIC TERMS AND DEFINITIONS.....6	
1.1. The concept and main problems of metrology ...6	
1.2. The concept of measurement8	
Chapter 2. GENERAL INFORMATION ON MEASUREMENTS...10	
2.1. Specific features of the measuring process.....10	
2.2. Measuring instruments12	
2.3. Measurement classification.....14	
Chapter 3. MEASURING INSTRUMENTS16	
3.1. Weight measurement and control16	
3.2. Measurement and control of geometrical quantities.....17	
3.3. Measurement and control of mechanical quantities.....18	
3.3.1. Methods and means of measurement and control kinematic quantities.....18	
3.3.2. Methods and means of measurement and control of dynamic quantities21	
3.3.3. Methods and means of measurement and control of mechanical properties of substances and materials22	
3.4. Measurement and control of thermal quantities.....23	
3.4.1. Methods and means of temperature measurement and control.....23
