

Abstract

The modern world is undergoing a major turning point in its history. We live in an era of advancing globalization, in the epoch of the enhancement of communication means that are changing the way we live, our talk and conscious and require specific needs for the educational system. The future depends on the ability to understand and accept new concepts, to make choices, to learn and to adapt to changing conditions in a lifetime. New Age has set up the strict alternatives to the young generation, but also provides new opportunities as well. The new generation of computers, the World Wide Web led to changes in the rôle of the human person in society development. Way in which people create, build, store, transmit information has radically changed, so the form of communication, education, and work have changed as well. These above mentioned tendencies of the new era civilization development determine the challenge to education. Training will be effective only if it will meet the demands of a new era, so now the goal of education in the world is to meet the needs of a modern economy and society. In this regard, the most popular competencies, abilities of people in the knowledge of new economy emerging are the ability to acquire knowledge, to apply them, and to structure and generate. New understanding of education actualized terms "competence" and "competency".
