

**Чекина Е.Б., Капасова Д.А. Русский язык: Учебное пособие для студентов-биологов. – Алматы: Казак университеті, 2013. – 212 с.**

The authors of train aid put the aim educating of students of the Kazakh separations to reading of text on speciality, to his структурно-смысловому analysis and reproducing with different having a special purpose options.

Forming of linguistic bases and educating to practical skills of analysis of scientific text was included in the tasks of authors of Manual.

Linguistic basis of Manual is consideration of the phenomena of lexical, grammatical, syntactic and semantic co-ordination on the levels of word, word-combination, suggestion, text. Такой the conceptual foreshortening appears modern, perspective and practically important.

It is impossible not to mark that as didactic material of manual base for all biological specialities themes are chosen is "Anatomy of man", "Physiology of man" and concepts related to them.

Clearly and the structure of manual, reflecting all basic aspects of consideration of scientific text in the didactic foreshortening, is expediently careful thought out.

A manual is intended and for independent work of students, that is expressed in his construction: material of Manual is organized from simple to difficult, from well-known to unknown. For implementation of tasks on span-new for student material the algorithm of actions is given, on occasion the prepared variants of answers are offered for comparison. Control of implementation of tasks comes true in various forms.

All higher the said testifies to the large practical value manuals. It, undoubtedly, topically, conceptually carefully thought out, clearly on the structure of execution.
