FULL TEXT ARTICLES

FT-001 - Comparison of Genome Organizations of Lymantria dispar Nucleopolyhedroviruses (LdNPV) from Turkey	42-52
FT-002 - Orthoptera Fauna of Artvin	53-63
FT-003 - A Study on Determining Fish Consumption Behaviors of High School Students Studying in Muğla Province (Turkey).....	64-68
FT-004 - Antimicrobial Potential of Four Plant Species from Turkey.....	69-73
FT-005 - How we understand genetic diversity of sea turtles by using mtDNA	74-78
FT-006 - The Mixed-Stock Analysis Proved Diverse Genetic Composition of Stranded Loggerhead Turtles (<i>Caretta caretta</i>) Along the Turkish Coast.....	79-83
FT-007 - Gaining insights into the reproductive behaviour of <i>Caretta caretta</i>	84-88
FT-008 - Genetic Structure of Sporadic Nesting Loggerhead Sea Turtle (<i>Caretta caretta</i>) in Aegean Coast of Turkey.....	89-92
FT-009 - Impact of Phytic Acid on the Quality of Wheat Grains	93-99
FT-010 - Flea beetle (<i>Chaetocnema concinna</i> M, 1802) and brassy flea beetle (<i>Ch.breviuscula</i> Fald, 1884) as the main pests of the sugar beet.....	100-104
FT-011 - Analysis of Absheron Flora.....	105-113
FT-012 - Effect of Medical Aromatic Plant Extract on Wood Surface Roughness.....	114-119
FT-013 - Biomass: Waste Tea Plant Extract and Wood Thermogravimetric Analysis (TGA).....	120-126
FT-014 - Reproduction and use of medicinal rosemary in the Absheron peninsula	127-131
FT-015 - Diversity of medicinal plants growing in the area of South Caucasus Pipeline Expansion (SCPX) of Azerbaijan Republic	132-138
FT-016 - Ornamental Plants Resistant to Drought Stress in Landscape Areas	139-146
FT-017 - The Effect of Bacteria Applications Showing Accd Activity on The Seedling of <i>Cucumis melo</i> var. <i>agrestis</i> Seeds Under Lead (Pb) Stress	147-151
FT-018 - The Effect of Bacteria Applications Showing Accd Activity on The Seedling of <i>Cucumis melo</i> var. <i>agrestis</i> Seeds Under Nickel (Ni) Stress	152-157
FT-019 - Regression Tree Analysis of Factors Affecting First Flowering Time of <i>Tulipa gesneriana</i> L	158-164
FT-020 - The Modern Species Composition of the Commercial Ichthyofauna of the Middle and Lower Reaches of the Zhaiyk River.....	165-169
FT-021 - Potential in-vitro Biological Activities (FRAP, CUPRAC, β-Carotene-Linoleic Acid, Phosphomolybdenum Assays) of <i>Cyclamen cilicum</i>	170-175

ORAL PRESENTATIONS

PP-050 - Determination of Antioxidant Capacity and Total Secondary Metabolites of <i>Iris albicans</i> Extracts	302
PP-051 - Results of introduction and selection work on the creation of a valuable gene pool of <i>Sorghum saccharatum</i> (L.) Moench as a highly productive bioenergetic plant in the M.M. Gryshko National Botanical Garden.....	303
PP-052 - <i>Aeromonas hydrophila</i> from Siberian sturgeon (<i>Acipenser baerii</i>)	304
PP-053 - The persistence and performance of phosphate-solubilizing <i>Gluconacetobacter liquefaciens</i> qzr14 in a cucumber soil	305
PP054 - Control of risks imposed by plant viruses as the component of biosecurity in Ukraine.....	306

Aeromonas hydrophila from Siberian sturgeon (*Acipenser baerii*)

Abstract: *Aeromonas hydrophila* is the most dangerous member of the *Aeromonas* genus, causing massive deaths of sturgeons. To isolate bacteria, washes were taken from ulcers and internal organs of diseased fish. The isolate was a typically Gram-negative bacterium with a length of 1.5 μm and grew at 0–4% NaCl concentration (w/v) at pH 7.0–9.0, but not at 5% NaCl. In terms of temperature, growth and bacterial cell numbers were maximized at 37°C. At 42°C growth was clearly inhibited. The isolate was motile and urea was hydrolyzed. It registered positive for the Voges-Proskauer test, the oxidase test, gelatinase, arginine dihydrolase and capable of ferment glucose, mannitol and sorbitol to produce acid, but negative for lysine and ornithine decarboxylase. Further, this isolate was identified as *Aeromonas hydrophila* based on PCR analysis by using the specific primers to conserved regions of *lip*, *asaI* and 16S rRNA genes. Of the 10 virulent genes related to pathogenicity, seven virulence genes detected in this study (*aerA*, *hlyA*, *pla*, *ahpB*, *alt*, *ahe2*, and *gcat*). These genes, code the aerolysin, hemolysin, phospholipase A1, elastase, cytotoxic enterotoxin, serine protease Ahe2, and phospholipid-cholesterol acyltransferase, respectively. In sum, *A. hydrophila* was isolated from diseased *Acipenser baerii*. Its characteristics indicate it had considerable virulence and can be associated with acute infection in fish.

Keywords: sturgeons, *Acipenser baerii*, *Aeromonas hydrophila*, 16S rRNA gene, virulence genes
