Abstract

Training of the qualified specialist – the requirement of the present. The new education system is directed to popular writers of a source of the knowledge which perfectly acquired new modern technologies in a century of informatization, completely meeting requirements of society during a globalization era, and also it is aimed at training of the competitive specialist with high active living position propagandizing the Kazakh national traditions and customs.

Now in HIGHER EDUCATION INSTITUTIONS for the purpose of combination of knowledge and education different events are held. Namely, it is possible to celebrate the open educational hours organized and spent by teachers of department of biotechnology of S.K. Turasheva, G.I. Ernazarova, S.B. Orazova.

On open educational hours discussed the President's letter RK of N. Nazarbayev with students to the people of Kazakhstan “NURLY ZHOL – the WAY TO the FUTURE”. On the actions devoted to this subject student's youth of specialty biotechnology by the active participation showed the readiness for accomplishment of the educational tasks set by the Head of state for youth of the country.

The future of the country – youth is a creatively conceiving persons which will make a contribution to case of preserving the net, beautiful nature for future generation. Our country needs creatively conceiving innovative youth which perfectly acquired new innovative technologies. The future – in youth hands! All youth tries to make the contribution to development of the country on the basis of the seized specialty. For example, the student of 1 rate Ismailova Madina in the performance made such conclusion: “The hardworking person is waited by long and light life. Means, we, youth, in world educational space shall increase greatly the knowledge according to requirements of an era of globalization. Because for receipt of worthy education of youth all conditions are created”. Educational hour ended with an appeal: “We will always support the Message of the Head of state!”. Other educational hour has been spent with participation of the director of Institute of social and gender scientific research, dr.p.sci., professor Z.M. Kodar. Now the different nonconventional religious organizations of the western and east directions among the population sow a distemper, try to destroy patriotic feelings of the people, to make youth mankurts. “Preservation from the above-named religious trends begins with a family. Means, parents occupy a big role in development of religious literacy of youth. In families where good education, there and religious literacy has to be at the high level”, – has told the scientist-teacher Zamza Kodar.

Zamza Kodar on educational hour has widely discussed a problem of influence of religious trends in intellectual society, and also the concepts “wise society-the woman-intellectual potential”. Students

listened with great interest, have received answers to the questions concerning them. The students participating on a class hour have been divided into two groups: it is religious the illiterate persons and persons having data on nonconventional religious trends. They discussed problems of distribution of various nonconventional religious trends in modern society, looked for the reasons of their emergence, considered questions of increase in religious literacy of the people in intellectual society. On educational hour it has been told that modern religious trends: the Bahai Faith urges to be careful from different dangerous religious associations, the shaytan of groups, including a Satanism, antikhrstianizm, from an inclination to drugs, from the organizations allya ait, and zhola anti-terrorist operation – from the dangerous groups doing harm to health of the person. The open class hour has passed violently, each question was discussed openly and actively. Students and undergraduates argued, explained negative influence of religious trends in a wide format, proved stated by them, supplemented each other. The main thing has become clear the fact that they are interested in disclosure of this problem that it is a problem of today. It has been especially noted that in social development of Kazakhstan special attention is paid to a role of women. At the end of the evening Zamza Kodar has thanked students for active participation in educational hour on the subject “Woman and Religion”.

On April 21, at the Kazakh National University named after Al-Farabi “Literary and informative evening” within the 100 books project has been spent open educational hour. It was very interesting and unusual educational hour, other than others. It was the educational hour which has united students 1-2 courses of specialty “Biotechnology” of Kazakh National University named after Al-Farabi and students of 1 and 4 courses of specialties “Kazakh language and Literature”, “Philology” of the Kazakh state women's teacher training university. The student of 1st course Baymbetova Anar has expressed the opinion that future experts of biotechnology have surprised them with the positive relation, the knowledge, interest to the Kazakh literature though she, it seems, also has no relation to their future profession.

In an open educative an hour delivered speeches: Associate Professor Jamilya Otarbekova, deputy director of studies department Biotechnology Meiramgul Kudyretovna Narmuratova students, adviser groups.

At this educational hour, each student shared his knowledge about his favorite poets, writers, read excerpts from their works, also shared their views on the current and past literature, we talked about the uniformity, the monotony of modern poetry. In addition, questions were raised trilingual, on the impact of this policy on the Kazakh language and literature, on its positive and negative sides. We tied biology and literature. We drew attention to the fact that the Kazakh literature are works on human anatomy, the fact that the people of the human anatomy is well known in antiquity. From the set of images, which met from books, find their small-big disadvantages. The book is a wise old man, a clever mother, cheerful fellow girlfriends. Their good qualities in you inhabit roots, and only familiar to you the wonderful world appears in your life.

And in the book met with negative characters with all their disgusting qualities of the soul which appear to hate him, and the internal struggle is born of ignorance. Probably will not be superfluous, if we say that the book, fiction, created to fight evil, beauty and orients human life in the light path. In book images you learn about bitter facts of life, you will feel negative sides of human character and you train yourself for real life. How many heroes of many writers have become faithful companions, faithful friends of many readers ...

We, the students of the two universities, decided a week to read at least 1-2 books, think, and the remaining young people and students support our decision, and they will have the desire to read the book.

Our wise people say: “The teacher never stops learning”, so invite all together to carry out substantial activities in the education of young people in the age of integration of education and science!
