Definition

Designed to process product information in all areas of the national economy. Contains a list of codes and names of hierarchically classified groups of products types. At each level of classification, the division is in accordance with Art. 27 of the Budget Code of the Republic of Kazakhstan, a single budget classification includes:

Classification and coding of types of economic activity, statements of legal entities, branches and representative offices (business entities) during registration.

The classifier establishes the classification and coding of forms and types of ownership in the Republic of Kazakhstan and is intended for use in statistical activities in the collection and processing of information on the Classifier of goods used in customs operations by declarants and customs inspectors. The rates of import and export duties depend on which code of the foreign trade activities the good relate to.

This classifier is intended for wide use for the purpose of accounting and statistical accounting.
